

AI Fundamentals

Module 1

Collaborate with AI

AI Fundamentals

Video • 3 min

Adapt an collaborative research with AI

Video • 3 min

Three ways to collaborate with AI

Reading • 4 min

Ways, what advice do you have for people getting started with AI?

Video • 1 min

Module 2

Practice using AI

Tell us about your experience with AI in under 2 minutes

Ungraded Quiz • 12 min

Get the most out of labs

Reading • 4 min

Complete labs with Google AI Pro at no cost

Reading • 4 min

Redeem your Google AI Pro trial

Ungraded Quiz • 4 min

Breakdown video with Gemini Lab • 12 min

Can't, how has AI been blowing your mind recently?

Video • 42 sec

Module 3

Learn how AI works

Module 4

Design great prompts

Module 5

Level up your prompts

Module 6

Use AI responsibly

Get the most out of labs

004 / 617

To learn AI, you need to use AI. In this certificate, you'll practice using AI across 20+ hands-on labs designed to mirror real, workplace tasks. Each lab includes an expert-led video tutorial, and written instructions that you can follow at your own pace. As you progress through the certificate, you'll build a portfolio of AI projects you can use at work, right away.

Note: Use a desktop or laptop computer to access the labs. Labs **cannot** be accessed on a mobile phone or tablet.

How to launch a lab

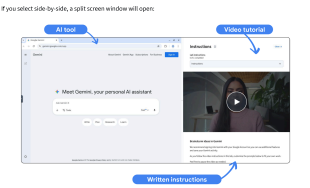

When you reach a lab, click the "Launch lab" button from a desktop or laptop computer. The "Launch lab" button will open a new browser tab inviting you to choose how you want to learn:

- Seamless login:** This option opens a new browser tab pre-loaded with the AI tool so you can practice. Toggle back to the original tab to access the video tutorial and written lab instructions.
- Side-by-side learning:** This option takes you to a split screen allowing you to practice using AI side-by-side with the video tutorial and written lab instructions below. This is the recommended option.

Which option you choose to log in to, each lab can be completed using either. Just be sure to log into your Google account before you prompt Gemini to save your work.

How to complete a lab using side-by-side learning

- Left side:** A virtual browser with Gemini loaded will open. This is where you will practice using AI. You can save the work you do in the lab by saving into Google. Some labs might require you to log in before you start. If you prefer to use a different AI tool, simply type it into the URL bar.
- Right side:** You'll find a video tutorial where your Google AI instructor will take you through each step of the lab. And, below the video tutorial, you'll find written lab instructions.

AI assistants like the Gemini app and Gemini Notebook are evolving and improving every day. In some instances, you may notice that what you see in the video tutorial looks a little different than your screen; however, you will still be able to complete the task as described in the lab instructions.

- The written lab instructions include sample prompts, these are highlighted in gray. To use a sample prompt:
- Copy the prompt:** Copy the sample prompt from the lab instructions by selecting the text, right clicking on the selected text, and selecting copy.
 - Paste the prompt:** Paste the sample prompt into Gemini (on the left side of the screen) by right clicking and selecting "Paste".
 - Edit the prompt:** Edit the text in brackets to personalize your prompt.

Please note, keyboard shortcuts for copy and paste may not work in Coursera labs.

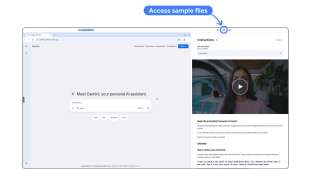

How to complete a lab using seamless login

If you select "seamless login", two new browser windows will open. One will show the video tutorial and written instructions. The other will load the AI tool for you to practice. Keep both tabs open to follow the written instructions and complete your lab.

How to use files and documents in your labs

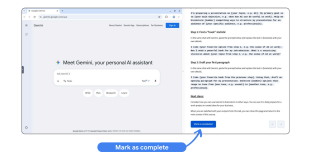

Some of the labs will involve uploading files. For example, a report or summary, or a spreadsheet to analyze. You can use your own files, or use the sample files provided.

- To use a sample file:** Click the file icon at the top of the lab instructions. Then, click "Use Template" in the top right corner, which will open the file and save it to your Google Drive. You will then be able to use the file via Google Drive and/or upload it to the tool you are using.
- To upload your own file:** Click the + symbol in the prompt box, and select "Add from Drive".

How to finish a lab

After you complete every step of the lab, scroll to the end of the written lab instructions and select "Mark as completed."

Once you have completed the lab, close the browser tab to return to the "Launch lab" page. From there, progress to the next item in the course by selecting, "Go to next item."

Put it to work

Get the most out of each lab by applying what you learn to your own work.

Mark as completed
