

Advanced Azure Architecture and Migration Strategies

Module 1

Design for High Availability

- Introduction to the Course 'Advanced Azure Architecture and Migration Strategies'
Reading • 10 min
- Full Specialization Resources
Reading • 10 min
- Identify Availability Requirements of Azure Resources
Video • 14 min
- Recommend a High Availability Solution for Compute
Video • 14 min
- Solution for Non-relational Data Storage
Video • 10 min
- Solution for Relational Data Storage
Video • 24 min
- Understanding High Availability in Azure Dialogue • 15 min
- Design for High Availability - Assessment Graded Assignment • 15 min

Module 2

Design a Compute Solution

Module 3

Design an Application Architecture

Module 4

Design Migrations

Module 5

Design Network Solutions

Introduction to the Course 'Advanced Azure Architecture and Migration Strategies'

0:28 / 2:24

1x

Welcome to the course **Advanced Azure Architecture and Migration Strategies**. The third of the 3-course Specialization in [Designing Microsoft Azure Infrastructure Solutions \(AZ-305\)](#) 

The course is structured into five comprehensive modules:

1. **Design for High Availability:** In this module, we will explore strategies to ensure uninterrupted service delivery through high availability design in Azure. From identifying resource availability requirements to recommending tailored solutions for computing and data storage, this section equips you with the expertise to build resilient and reliable Azure architectures.
2. **Design a Compute Solution:** In this module, we will delve into the intricacies of designing Azure compute solutions that align with specific workload requirements. Covering virtual machines, containers, and serverless architectures, this section ensures you can craft efficient and scalable compute environments to meet organizational goals.
3. **Design an Application Architecture:** In this module, we will focus on building robust application architectures on Azure. From optimizing caching and messaging to designing automated deployment solutions and API integrations, this section empowers you to create highly efficient and modern application ecosystems.
4. **Design Migrations:** In this module, we will explore the methodologies for seamless cloud migration using Azure. By leveraging the Cloud Adoption Framework and evaluating on-premises resources, you will gain the knowledge to design effective migration strategies for various data and application types.
5. **Design Network Solutions:** In this module, we will examine the fundamentals of network design within Azure. From connecting resources to optimizing performance and security, this section equips you with the skills to create robust, scalable, and secure networking solutions tailored to complex workload demands.

Target Learner: Designed for experienced IT professionals, solution architects, and cloud engineers with prior Azure knowledge or cloud computing experience.

Learning Objectives:

1. Design highly available and resilient Azure solutions.
2. Build advanced compute and application architectures, including serverless and container-based designs.
3. Develop strategies for seamless migrations and network solution designs in Azure.
