Which operation does the function of a data lake as a centralized repository?

☐ Store structured data from a single data source

☐ Store structured data from any data source

☐ Store structured and unstructured data from any source

☐ Store structured and unstructured data from a single source

Correct

A data lake is a centralized repository for storing your structured and unstructured data at any scale. You store your data as is, without first structuring the data. You can use different types of analysis on the data using big data tools, databases, data processing frameworks, visualizations, big data processing, and data analytics, and machine learning.

2 / 100%

What is the most cost-effective storage option for your data lake?

☐ Amazon ElastiCache (Amazon ElastiCache)

☐ Amazon S3

☐ Amazon Kinesis

☐ Amazon Redshift

Correct

Amazon S3 provides secure, durable, cost-effective, scalable, and cost-effective object storage service for structured and unstructured data. You store your data in the storage service of choice to build a data lake.

AWS services integrate with data lakes built on Amazon S3 to give insights from your unstructured datasets. You can use tools like big data analytics, artificial intelligence (AI), and machine learning, high performance computing (HPC), and multi-data processing. You also build on Amazon S3 security tools with regulatory compliance and disaster recovery strategy.

3 / 100%

Which services are used in the processing layer of a data lake architecture? (Select TWO)

☐ AWS Lambda

☐ AWS Glue

☐ Correct

AWS Glue is a serverless data integration service. AWS Glue simplifies the discovery, preparation, and coordination of data for analytics, machine learning, and application development.

☐ Amazon EMR

Correct

Amazon EMR is a big data service for processing data in the cloud using open-source tools. EMR is an option for your structured data at object storage, Apache Hadoop, Apache Hive, Apache Tez, Apache Mahout, and Hadoop. Amazon EMR simplifies and automates set up, operations, and scaling of your big data environments.

☐ Amazon QuickSight

☐ Amazon Athena
