

What's Next? Get Certified

Depending on your planned career path, there are different learning paths and certifications that you can pursue. The **Architecting with Google Cloud: Design & Process** course that you have just completed forms part of the following learning paths:

[Cloud Architect learning path](#)

Cloud Architects have a thorough understanding of cloud architecture. They design, develop, and manage robust and scalable cloud architecture solutions. The next course in this learning path is [Getting Started with Google Kubernetes Engine](#), where you will explore how to implement solutions using Google Kubernetes Engine (GKE).

The Cloud Architect learning path aims to assist you in obtaining the **Professional Cloud Architect** certification. Complete the curated skill badges for further hands-on learning and to earn Google Cloud skill badges. The first course in this learning path is [Preparing for your Professional Cloud Architect Journey](#). You will analyze use cases, identify technical watchpoints, and develop proposed solutions. You can test your abilities with hands-on labs and with sample questions similar to those on the exam.

[Cloud DevOps Engineer learning path](#)

Cloud DevOps Engineers are responsible for maintaining the efficient operations of the full software delivery pipeline. They also oversee that production balances both service reliability and delivery speed. The next course in this learning path is [Logging and Monitoring in Google Cloud](#) where, guided by the principles of Site Reliability Engineering (SRE), you will learn the techniques for monitoring, troubleshooting, and improving infrastructure and application performance in Google Cloud.

The Cloud DevOps Engineer learning path also has a series of quests that enable you to earn Google Cloud skill badges as you progress on your way to the **Professional Cloud DevOps Engineer** certification.

Good luck!
