1. Which statement best describes the purpose of functional requirements in a project?

1 / 1 point

- ☐ They outline the conditions for transitioning from the current to the desired state.
- ☐ They describe legal and compliance obligations the project must meet.
- ☒ They define what the system or product should do, detailing the specific features and behaviors that meet business and stakeholder needs.
- ☐ They define the system's quality attributes, such as performance and security.

**Correct**

Functional requirements describe the system's actions and capabilities, for example, user registration, product search, and secure payment processing in an e-commerce application.

2. What is the primary focus of Agile Business Analysis?

1 / 1 point

- ☐ To finalize all requirements and freeze scope early in the project lifecycle.
- ☒ To understand business needs and deliver technical solutions through collaboration, adaptability, and continuous improvement within an Agile framework.
- ☐ To complete extensive documentation before development begins.
- ☐ To define legal and regulatory standards for project compliance.

**Correct**

Agile Business Analysis emphasizes flexibility, user collaboration, and iterative feedback to ensure evolving requirements are met efficiently through user stories, backlogs, and sprints.

3. Why is it important for non-Project Manager (PM) and non-Business Analyst (BA) professionals to participate in the requirements elicitation process?

1 / 1 point

- ☐ Because they replace the Business Analyst in conducting elicitation workshops.
- ☐ Because their role is limited to reviewing requirements after the project is completed.
- ☐ Because they are responsible for final project approval and funding.
- ☒ Because they provide real-world operational insights that ensure documented requirements reflect actual business needs and constraints.

**Correct**

Non-PMs and non-BAs such as operations, finance, or HR managers understand day-to-day workflows and can reveal hidden challenges or opportunities that technical or project leads might miss. Their input helps turn assumptions into accurate, actionable requirements.

4. What is the main advantage of using Agile Business Analysis for requirements elicitation?

1 / 1 point

- ☐ It prevents changes to scope once requirements are approved.
- ☒ It allows teams to adapt quickly to change through collaboration, continuous feedback, and iterative delivery.
- ☐ It eliminates the need for stakeholder involvement once development begins.
- ☐ It focuses on creating detailed documentation before work starts.

**Correct**

Agile Business Analysis emphasizes flexibility and teamwork, enabling requirements to evolve through user stories, backlogs, and sprint reviews, ensuring solutions remain aligned with user needs.

5. What is the primary purpose of requirements prioritization in business analysis?

1 / 1 point

- ☒ To determine which requirements deliver the greatest value and should be addressed first based on business impact, urgency, and feasibility.
- ☐ To assign ownership of each requirement to the Business Analyst.
- ☐ To remove lower-priority requirements from the project permanently.
- ☐ To finalize the cost estimate for each requirement before project approval.

**Correct**

Requirements prioritization helps teams focus on high-impact items that align with business goals, ensuring limited time and resources are directed toward what matters most to stakeholders and customers.
