

The Search for Great Ideas

Harnessing creativity to empower innovation.

The Myth of the 'Eureka!' Moment

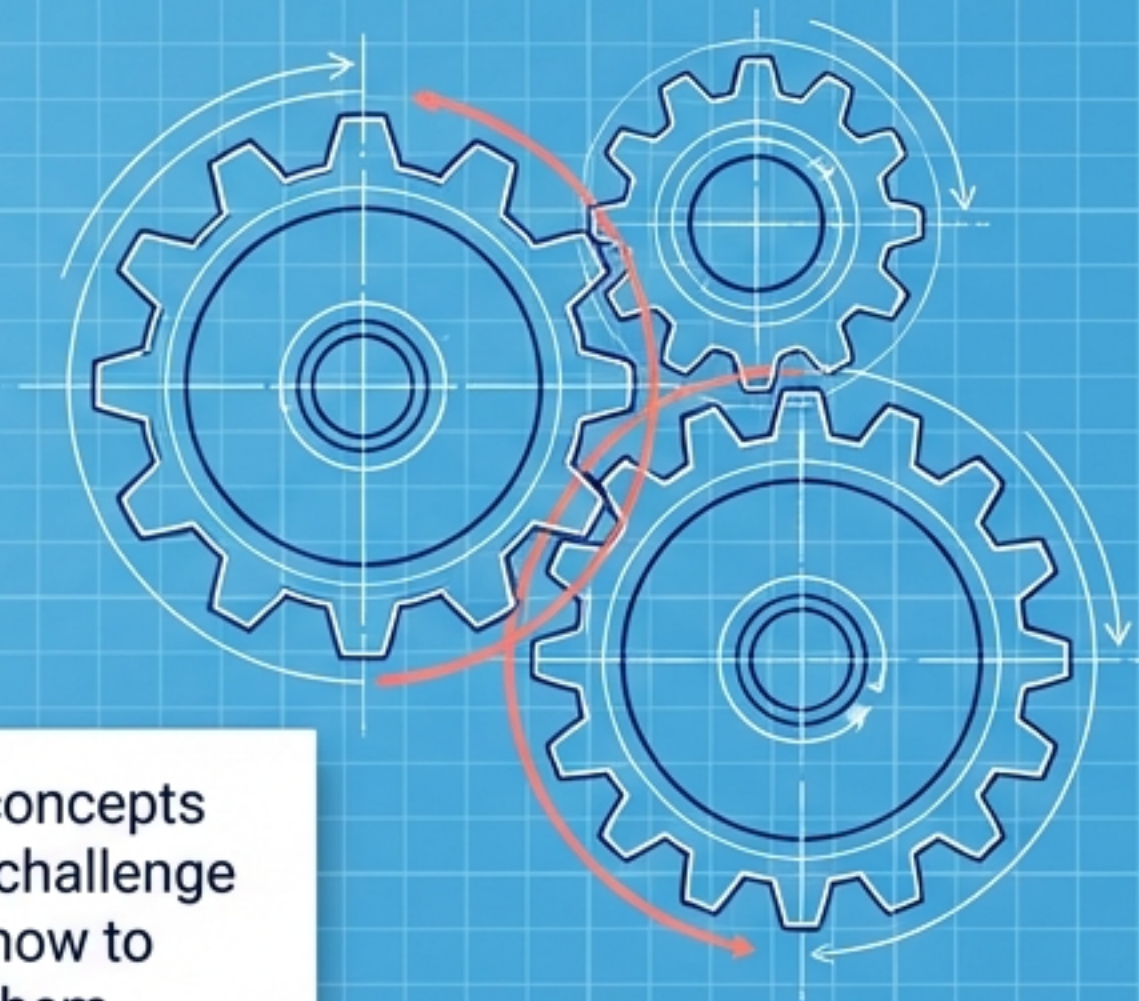

Great business concepts aren't random strikes of genius. They are the output of a deliberate, structured process.

The Myth

We all have compelling business concepts we've thought about for years. The challenge isn't having ideas—it's knowing how to generate, evaluate, and triage them.

The Method

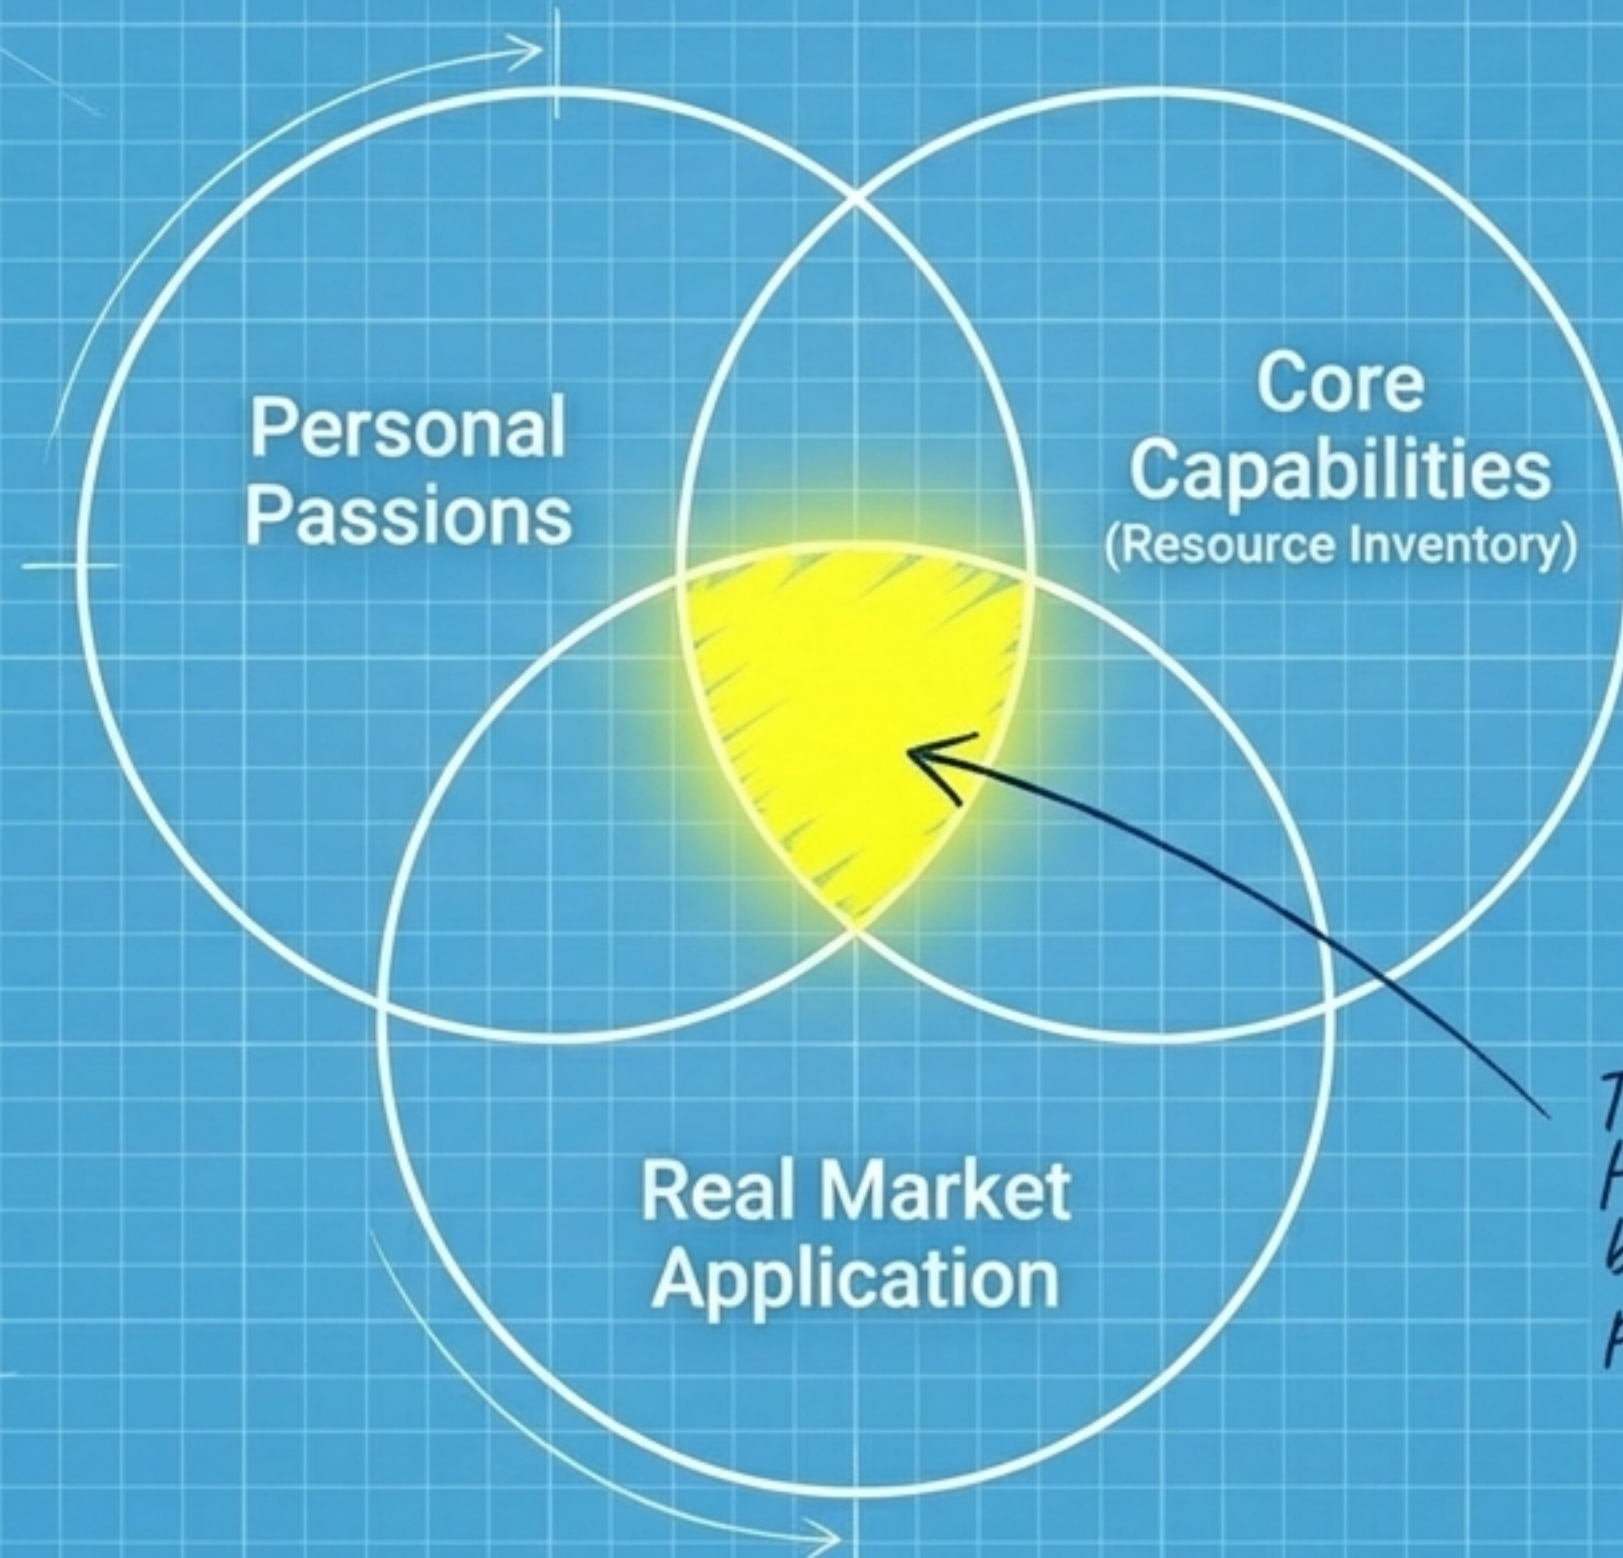

The Idea Triage Matrix

 The Trap: The Unvalidated Idea	 The Validated Idea: The MSU Way
1. Internally focused	1. Externally focused
2. Assumes customer behavior	2. Built on rigorous observation
3. Skips the Minimally Viable Product (MVP)	3. Utilizes Design Thinking constraints
4. Relies purely on "genius"	4. Relies entirely on Customer Discovery

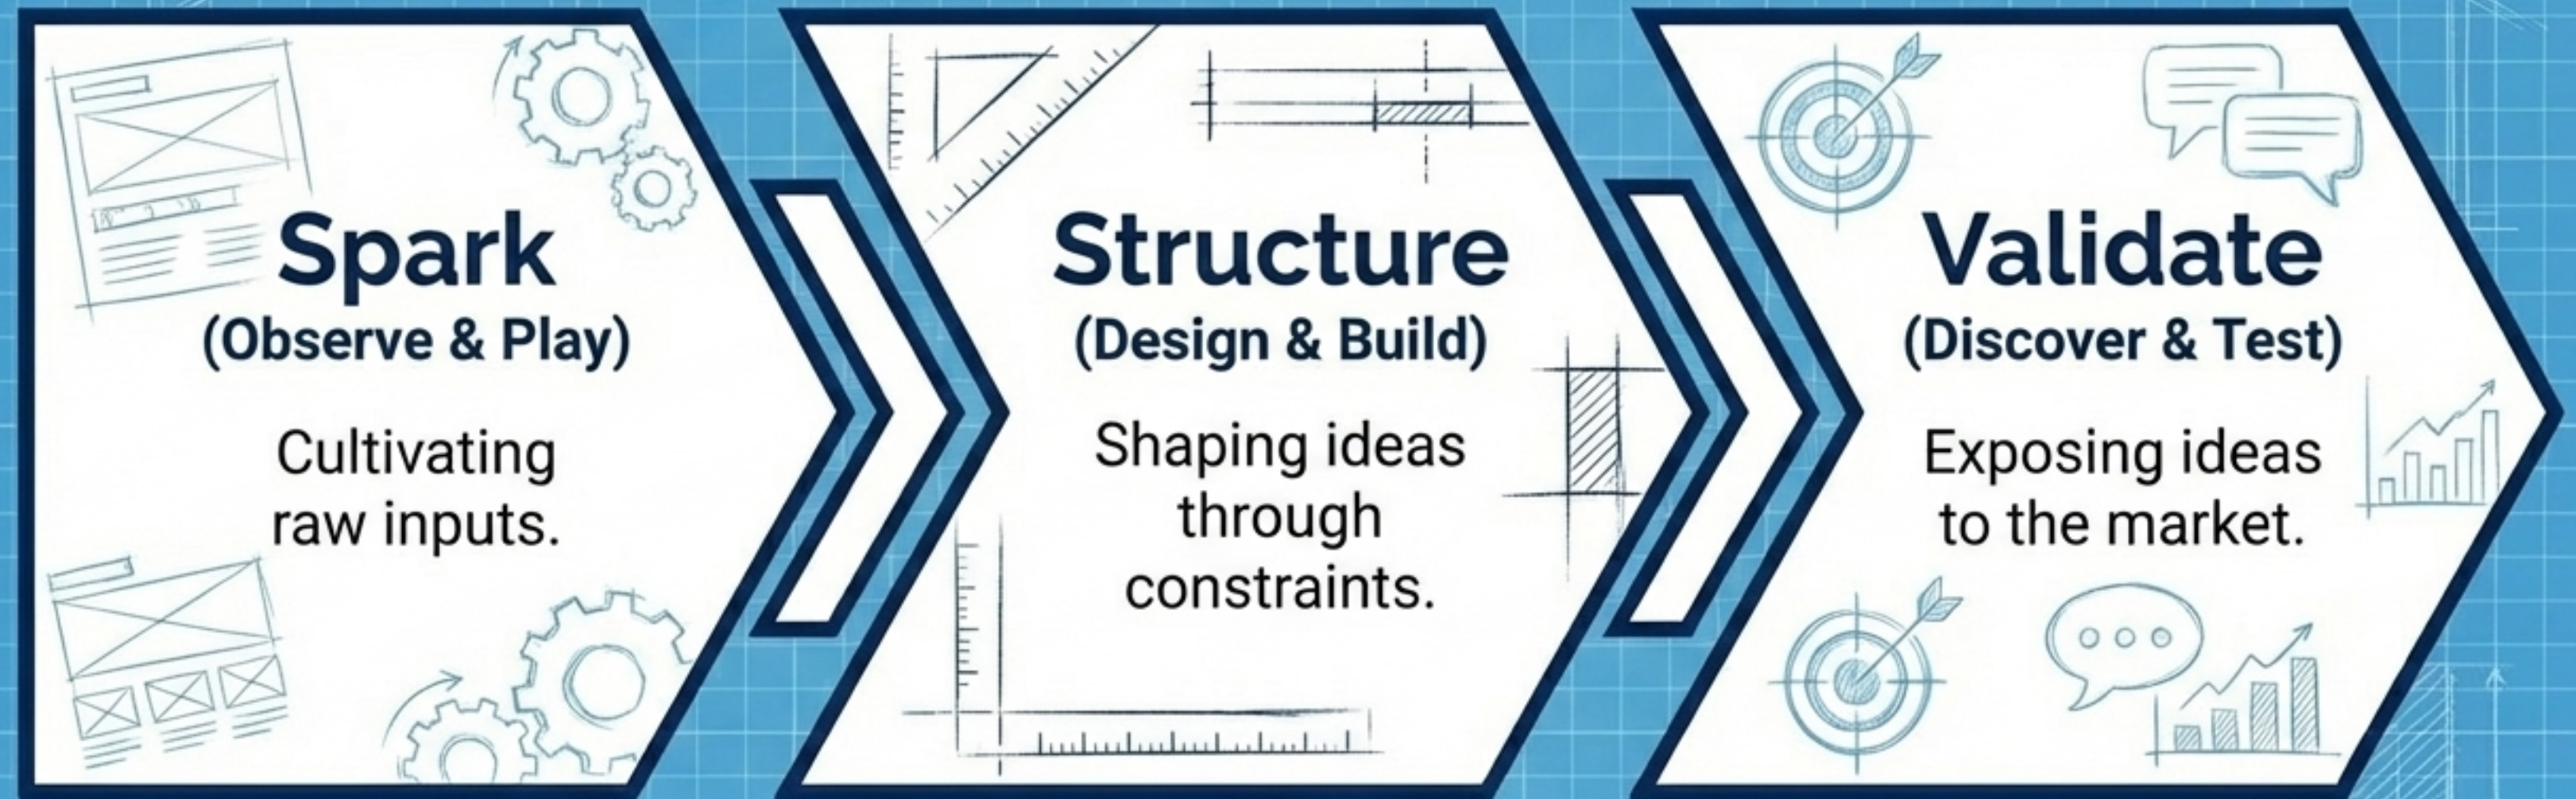

*Triage to evaluate
the good
from the bad.*

The Target: Pursuing the Right Opportunity

*The Sweet Spot:
High potential for
both commercial and
personal success.*

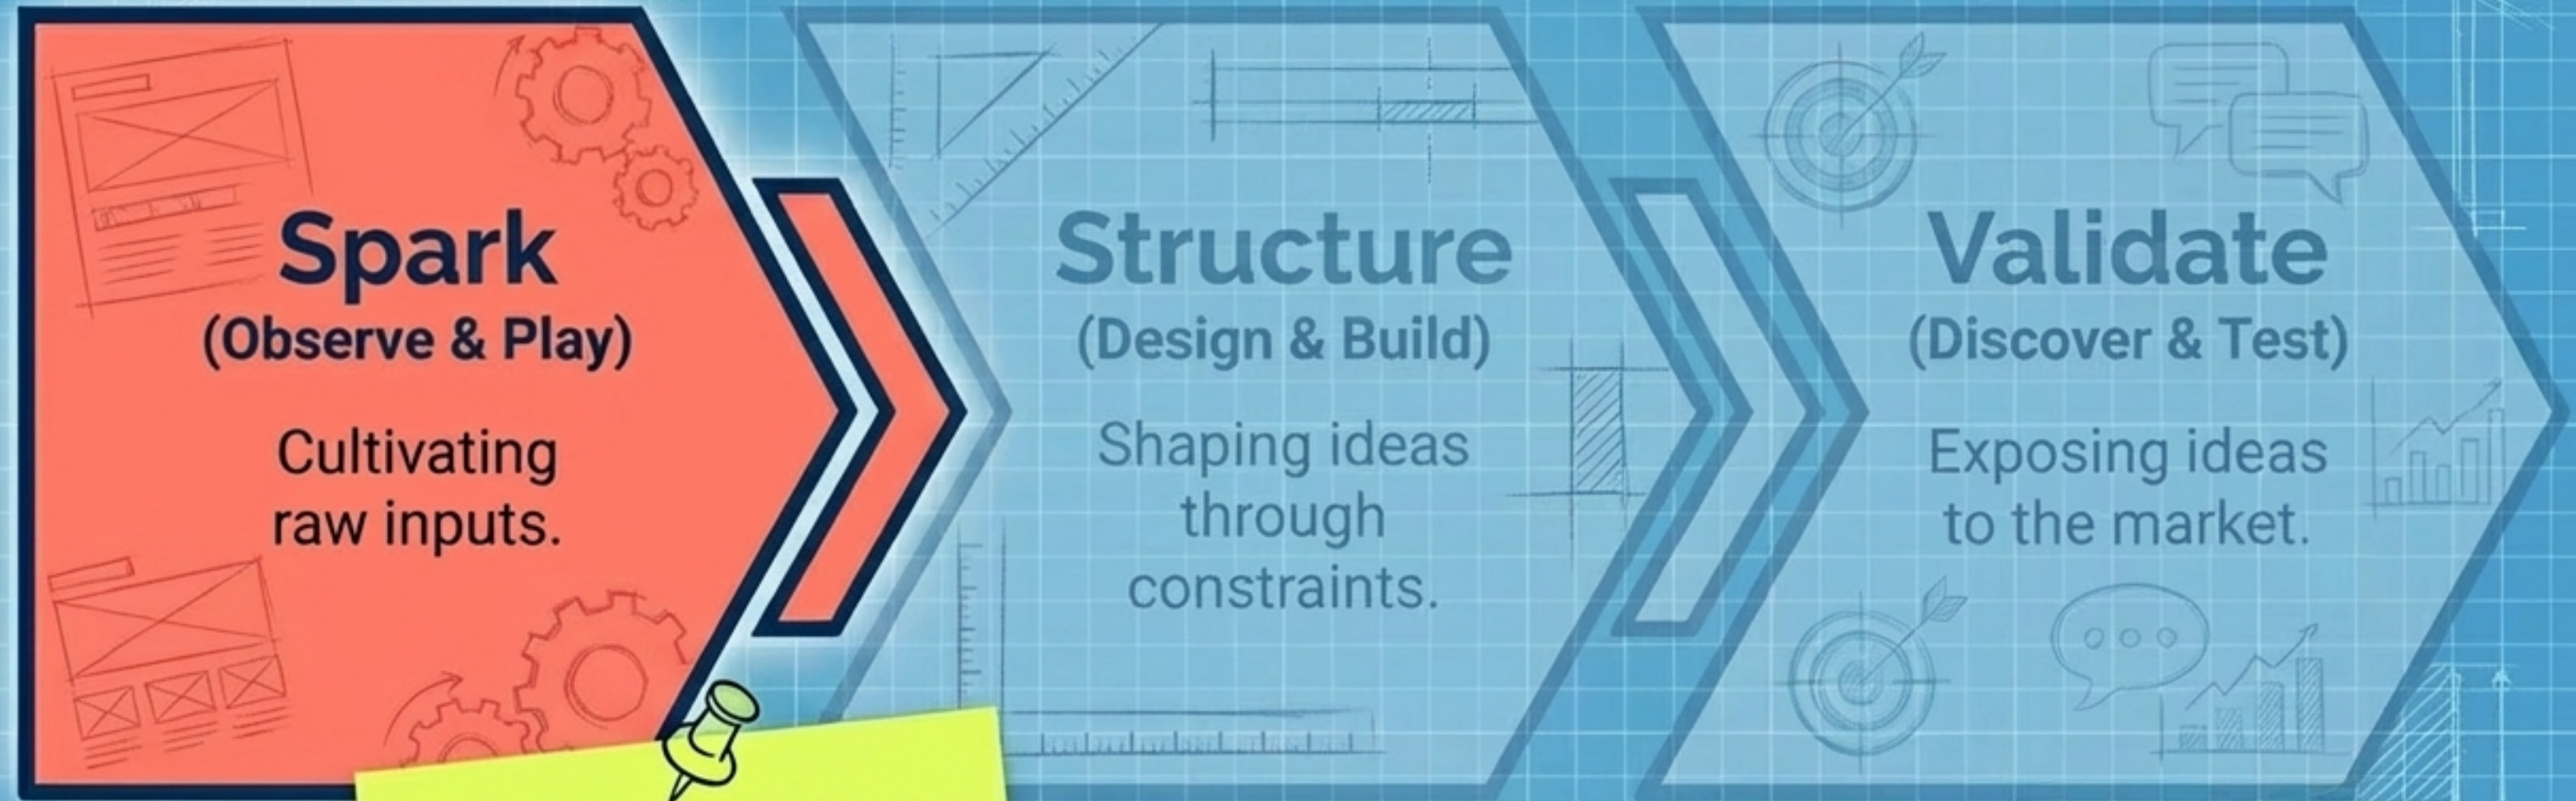

The Idea-to-Market Pathway

A three-phase methodology to evaluate the good ideas from the bad.

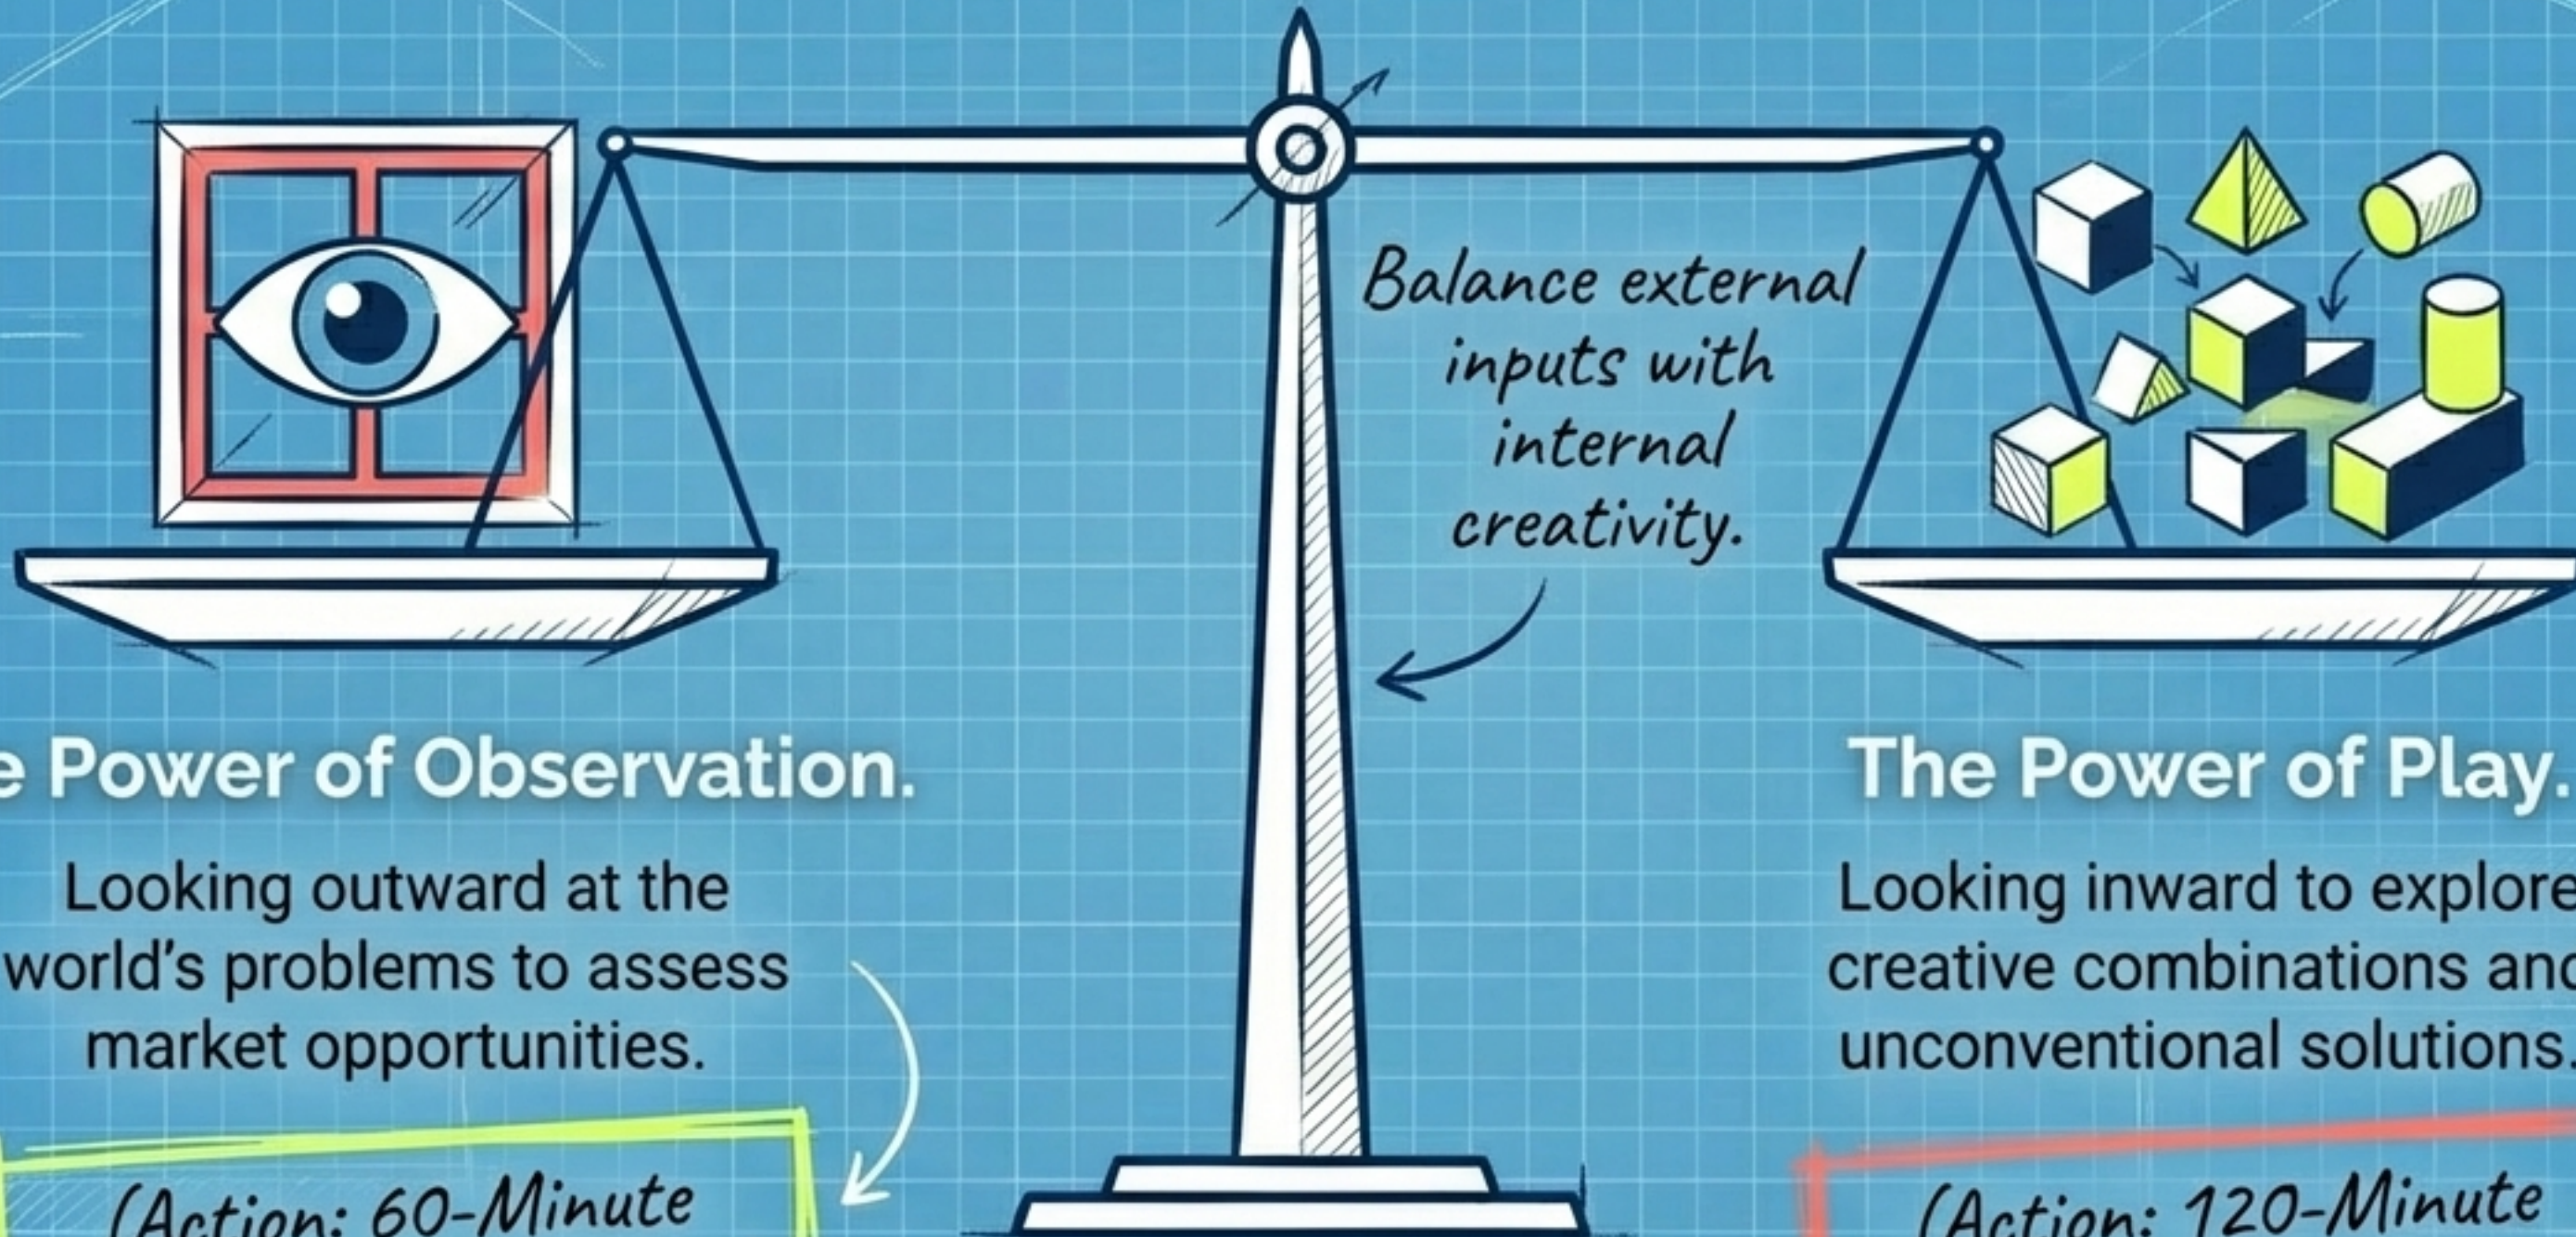

Phase 1: The Spark

How do entrepreneurs come up with great ideas? You must proactively put yourself in a position to change the business world by gathering the right inputs.

Module 1: Tools for Ideation.

Cultivating Raw Ideas

The Power of Observation.

Looking outward at the world's problems to assess market opportunities.

(Action: 60-Minute Observational Exercise)

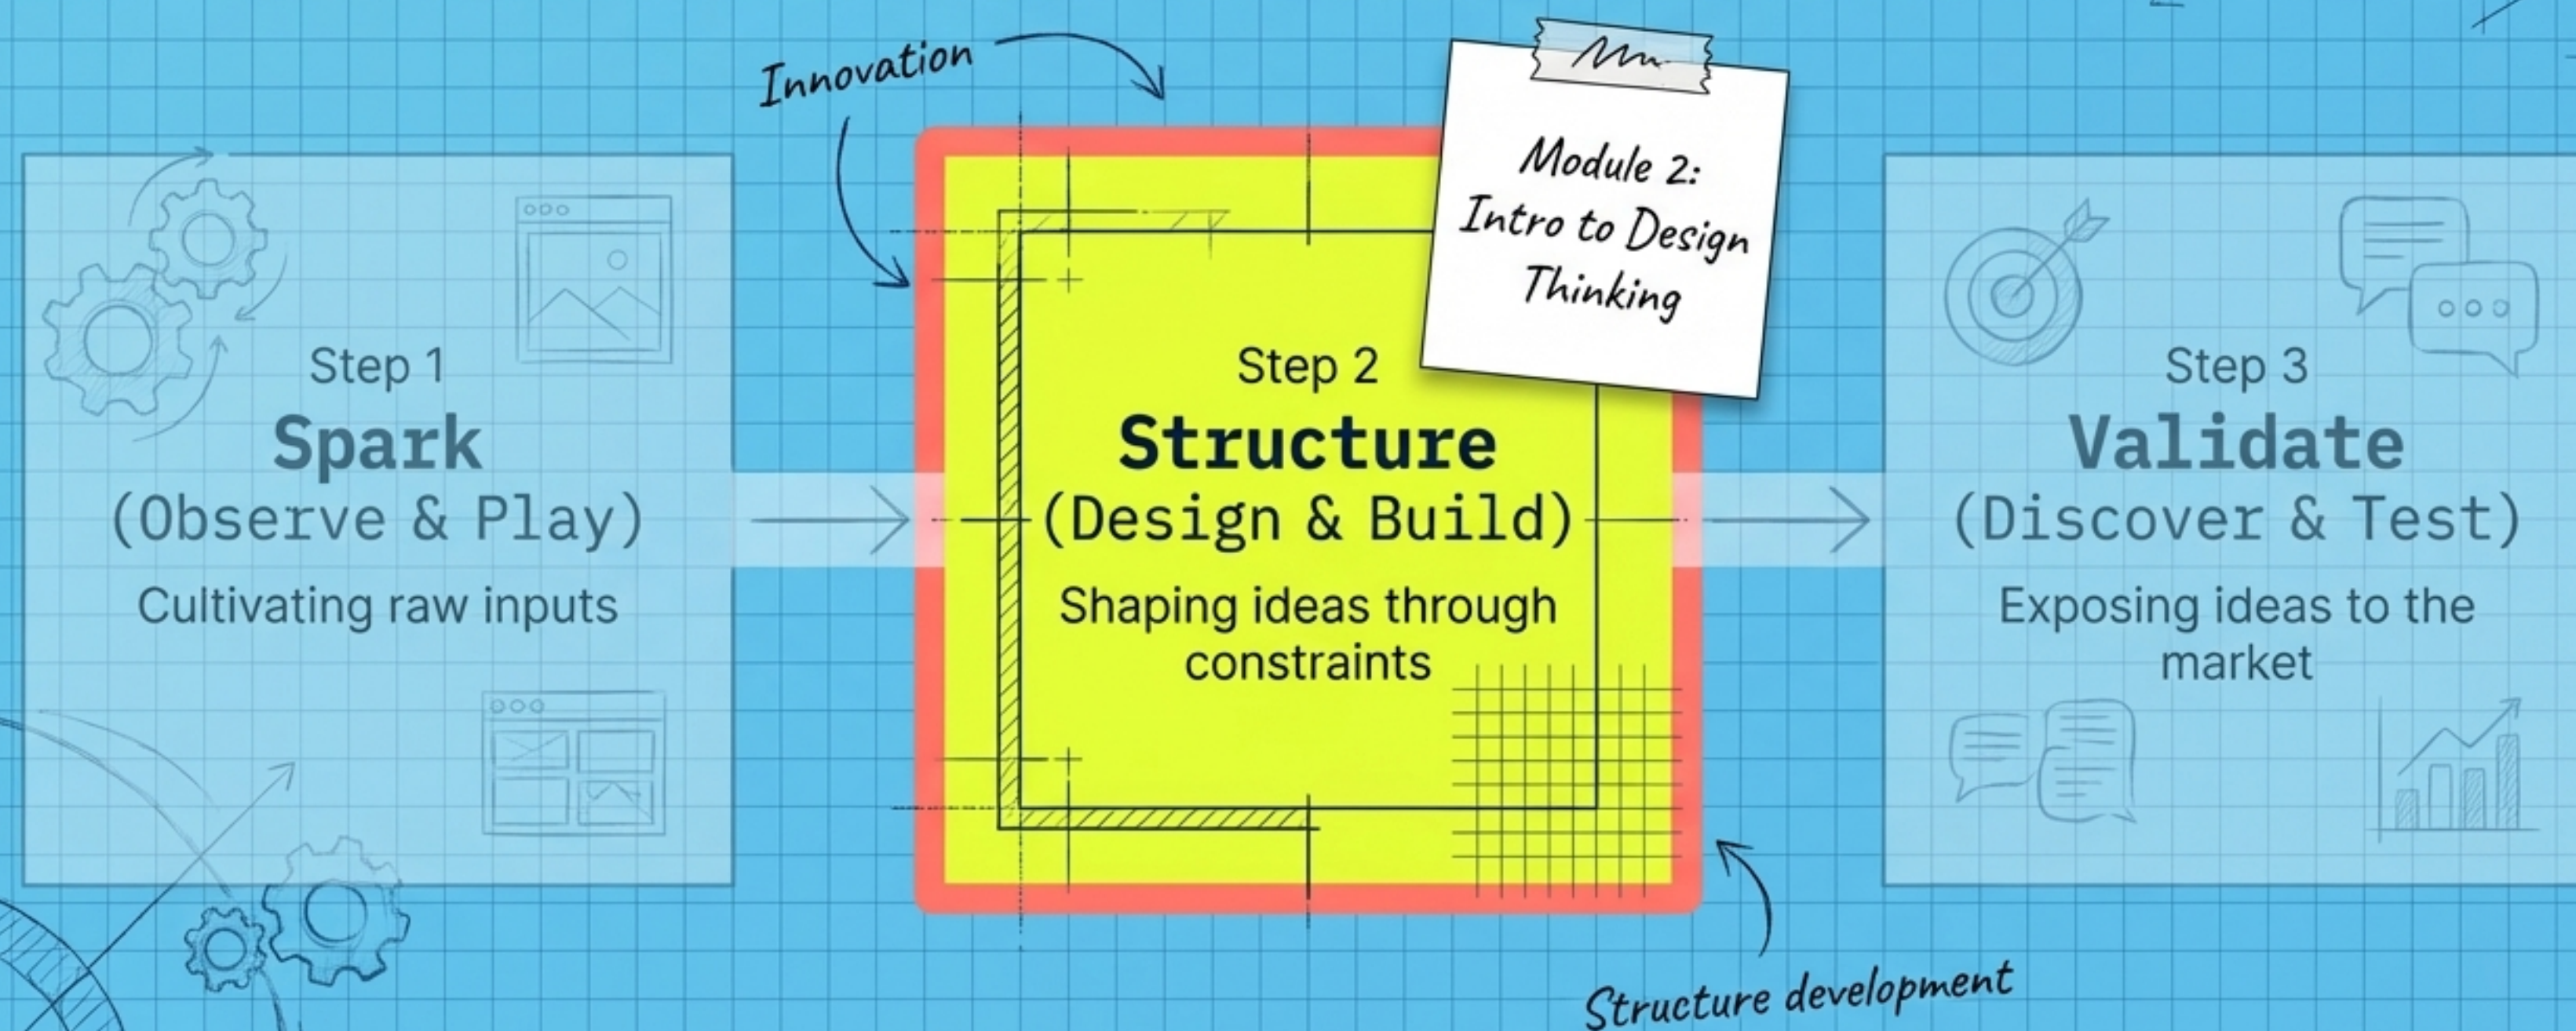

The Power of Play.

Looking inward to explore creative combinations and unconventional solutions.

(Action: 120-Minute Power of Play Exercise)

Phase 2: The Structure

Raw ideas are not solutions. Design Thinking Methodology provides a powerful, structured tool for forging abstract concepts into innovative, tangible solutions.

Forcing Constraints to Find Viability

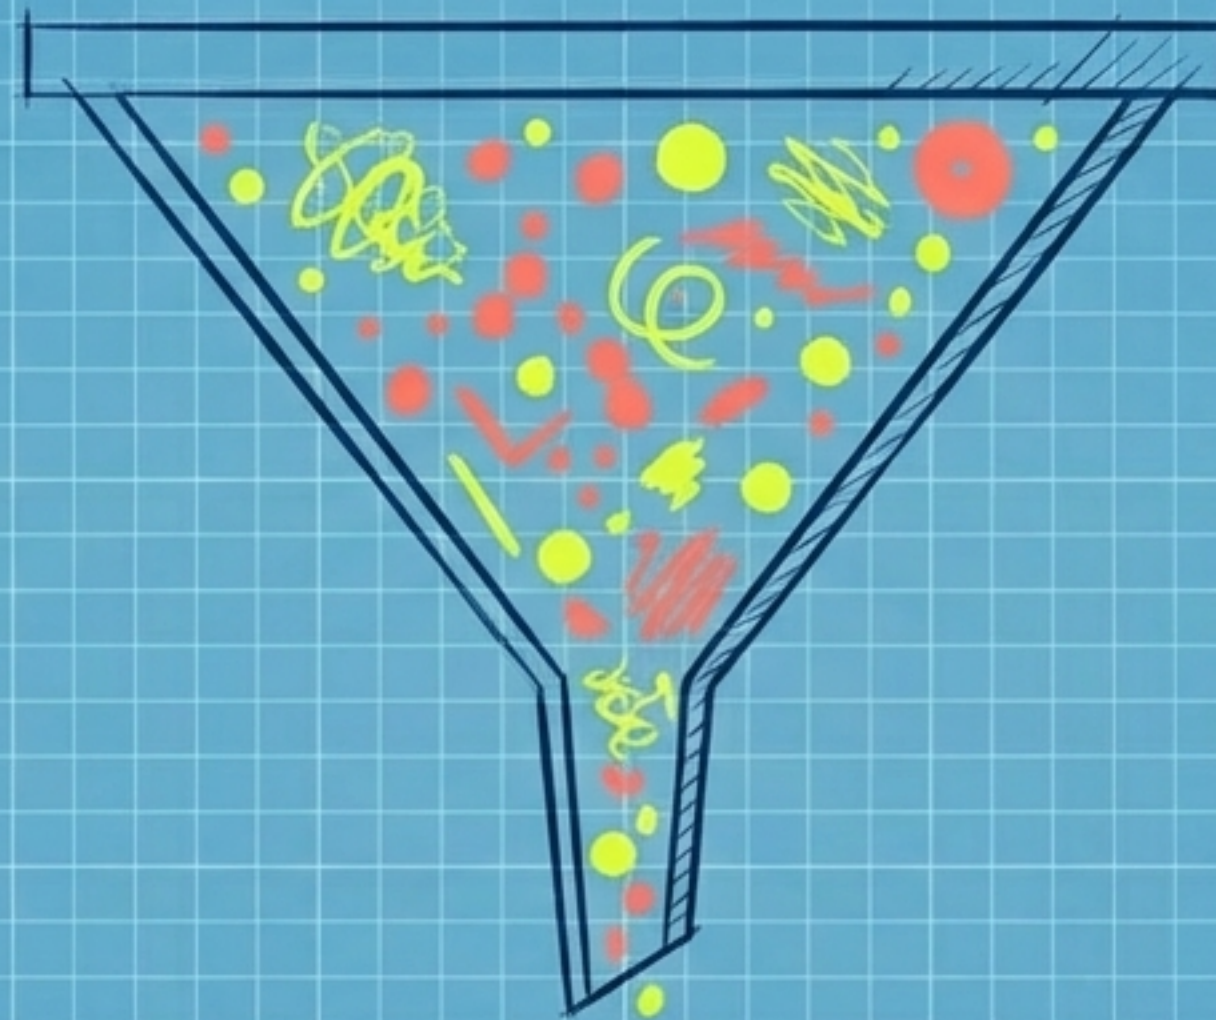

The Design Thinking Funnel

Inspiration & Ideation

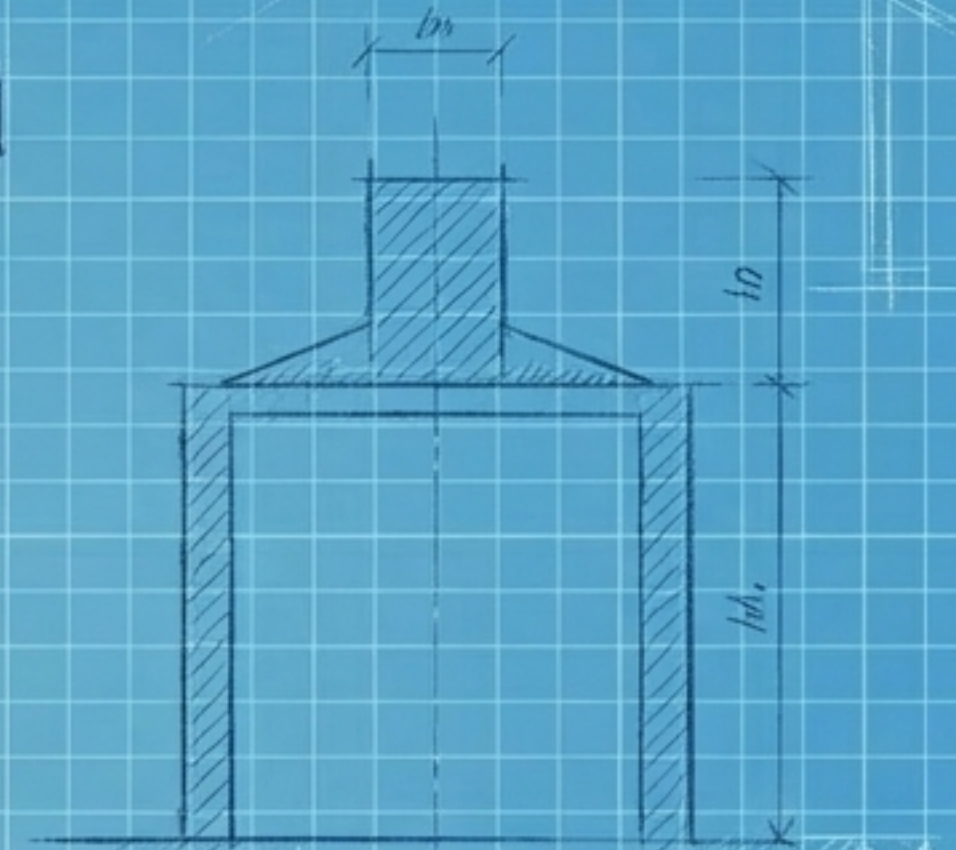

Asking "How might we...?" and conducting unstructured brainstorming.

Implementation & MVP

Distilling the brainstorm into a single Minimally Viable Product (MVP).

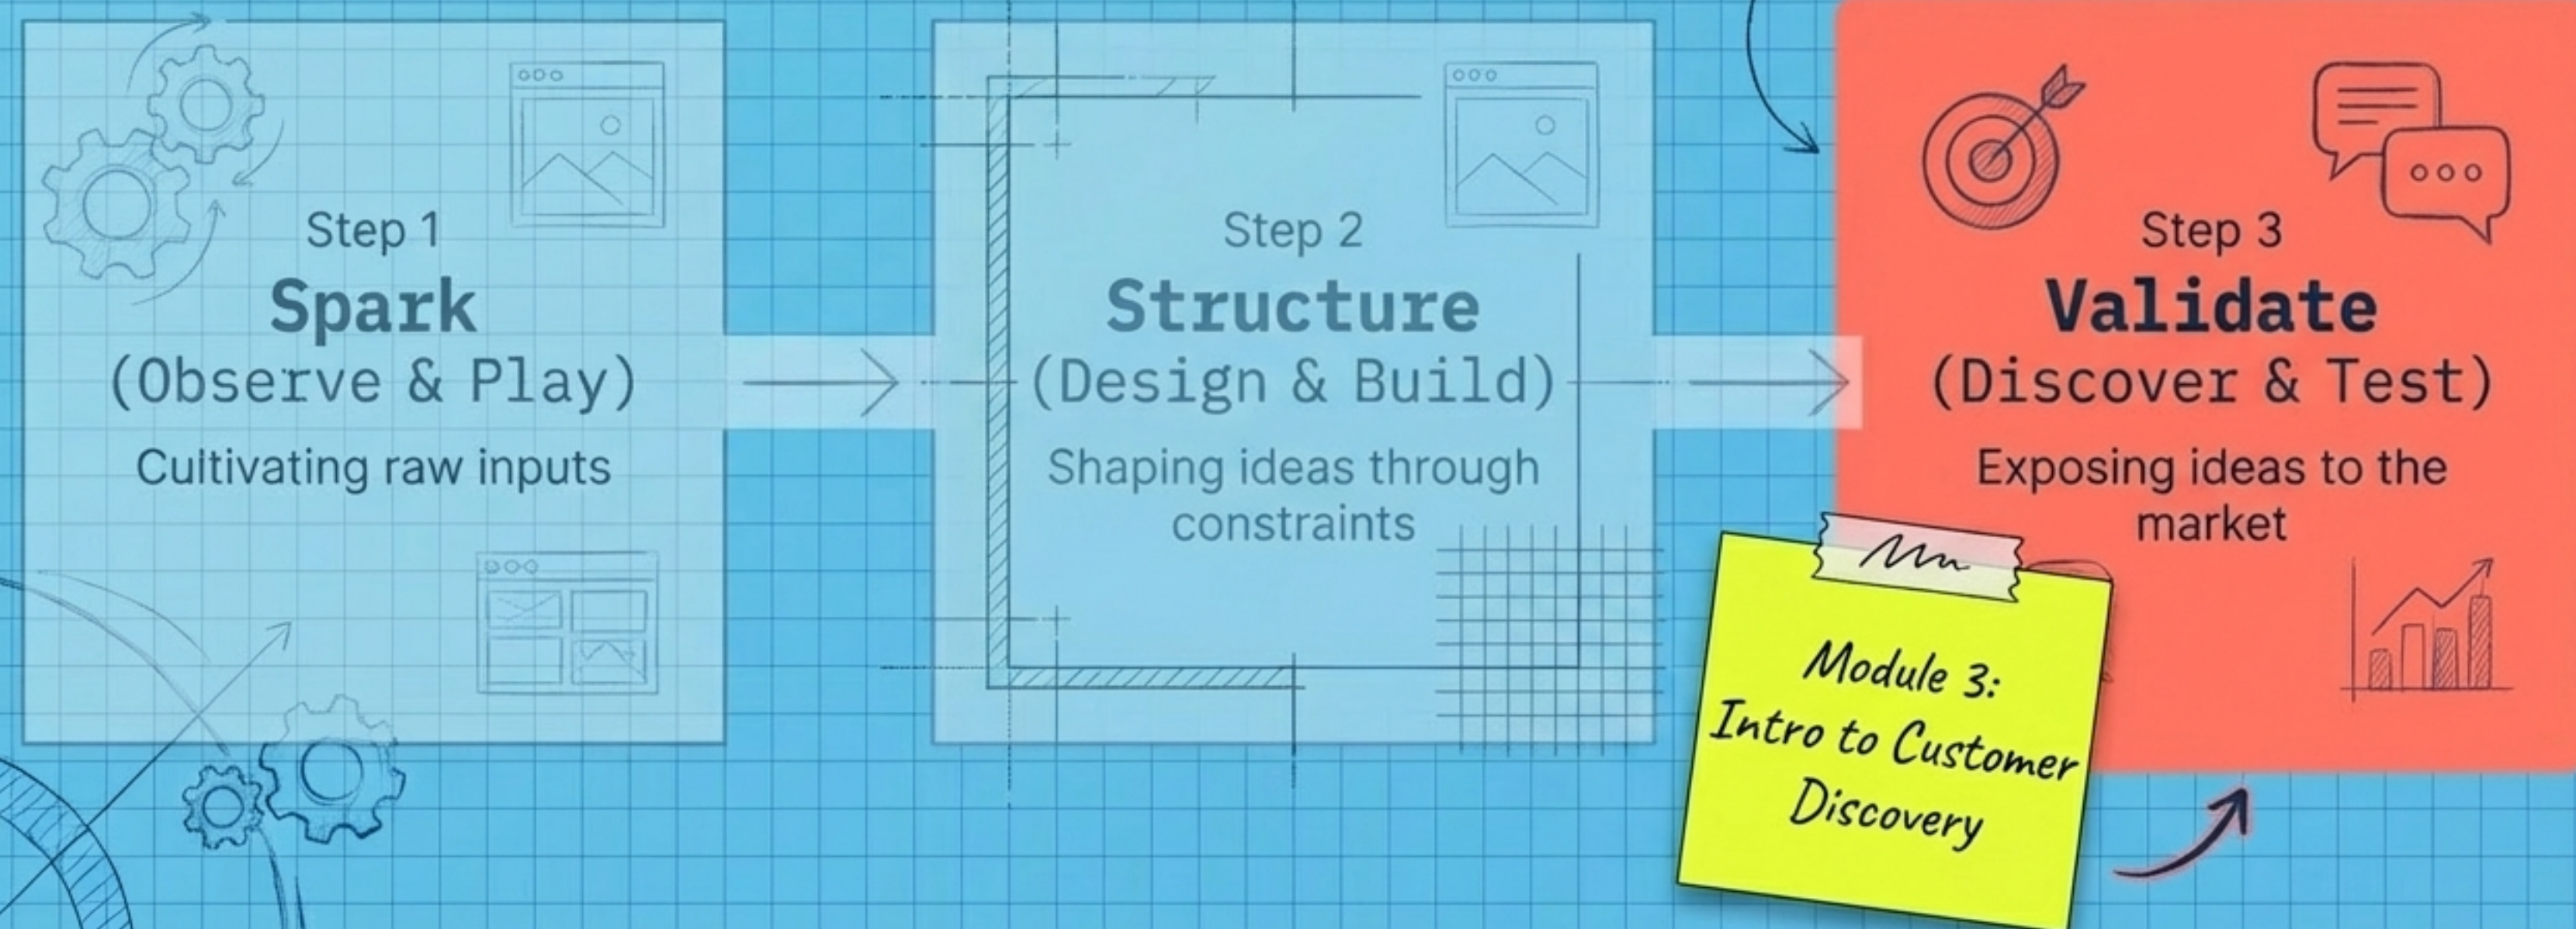

Triage potential ideas to find the one viable prototype.

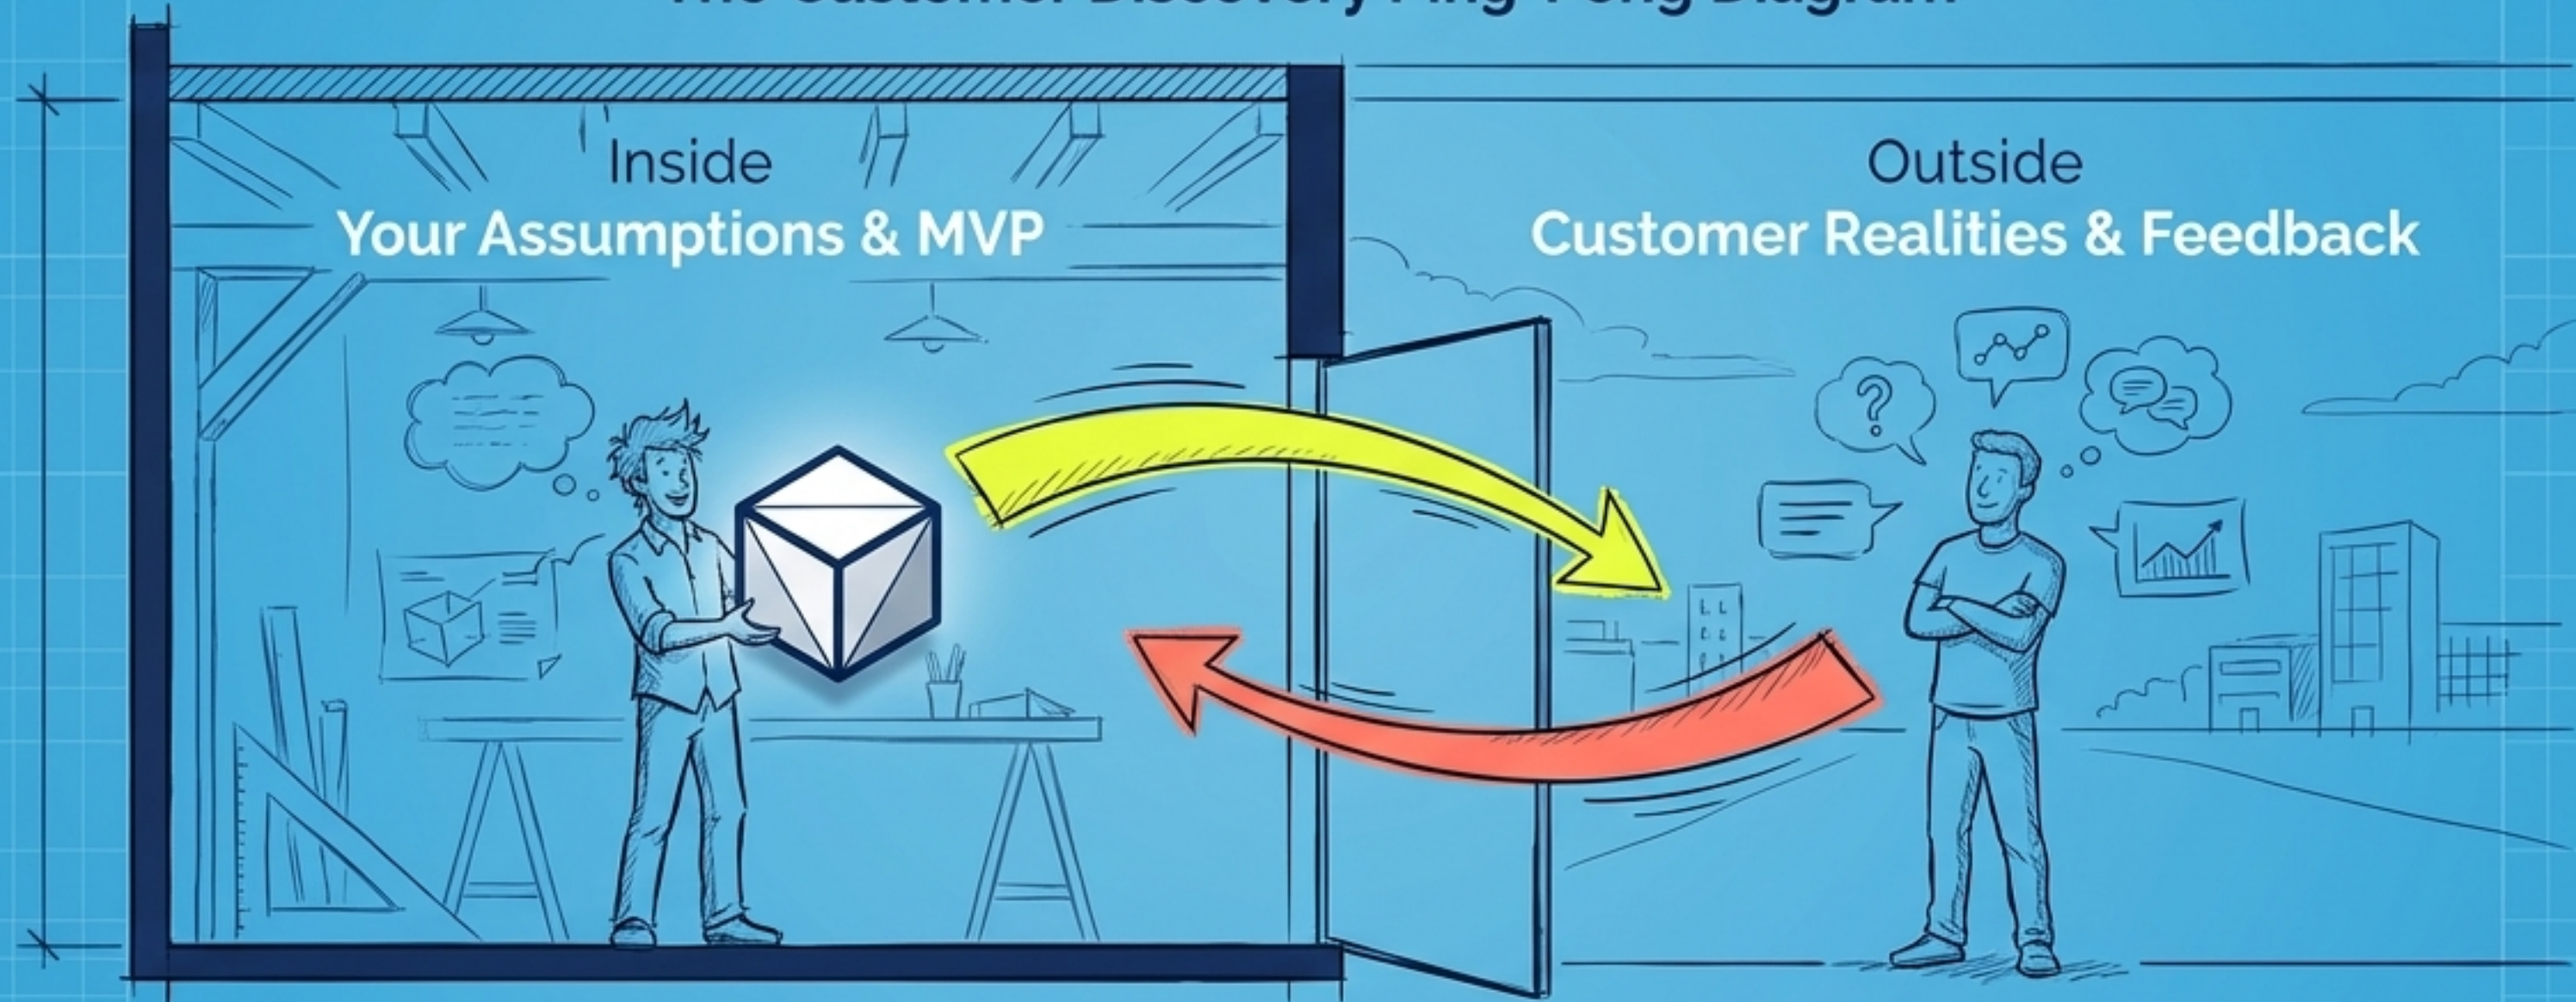

Phase 3: The Reality Check

More often than not, the best solutions don't lie with you.
They reside with your customers.

Exposing the Idea to the Market

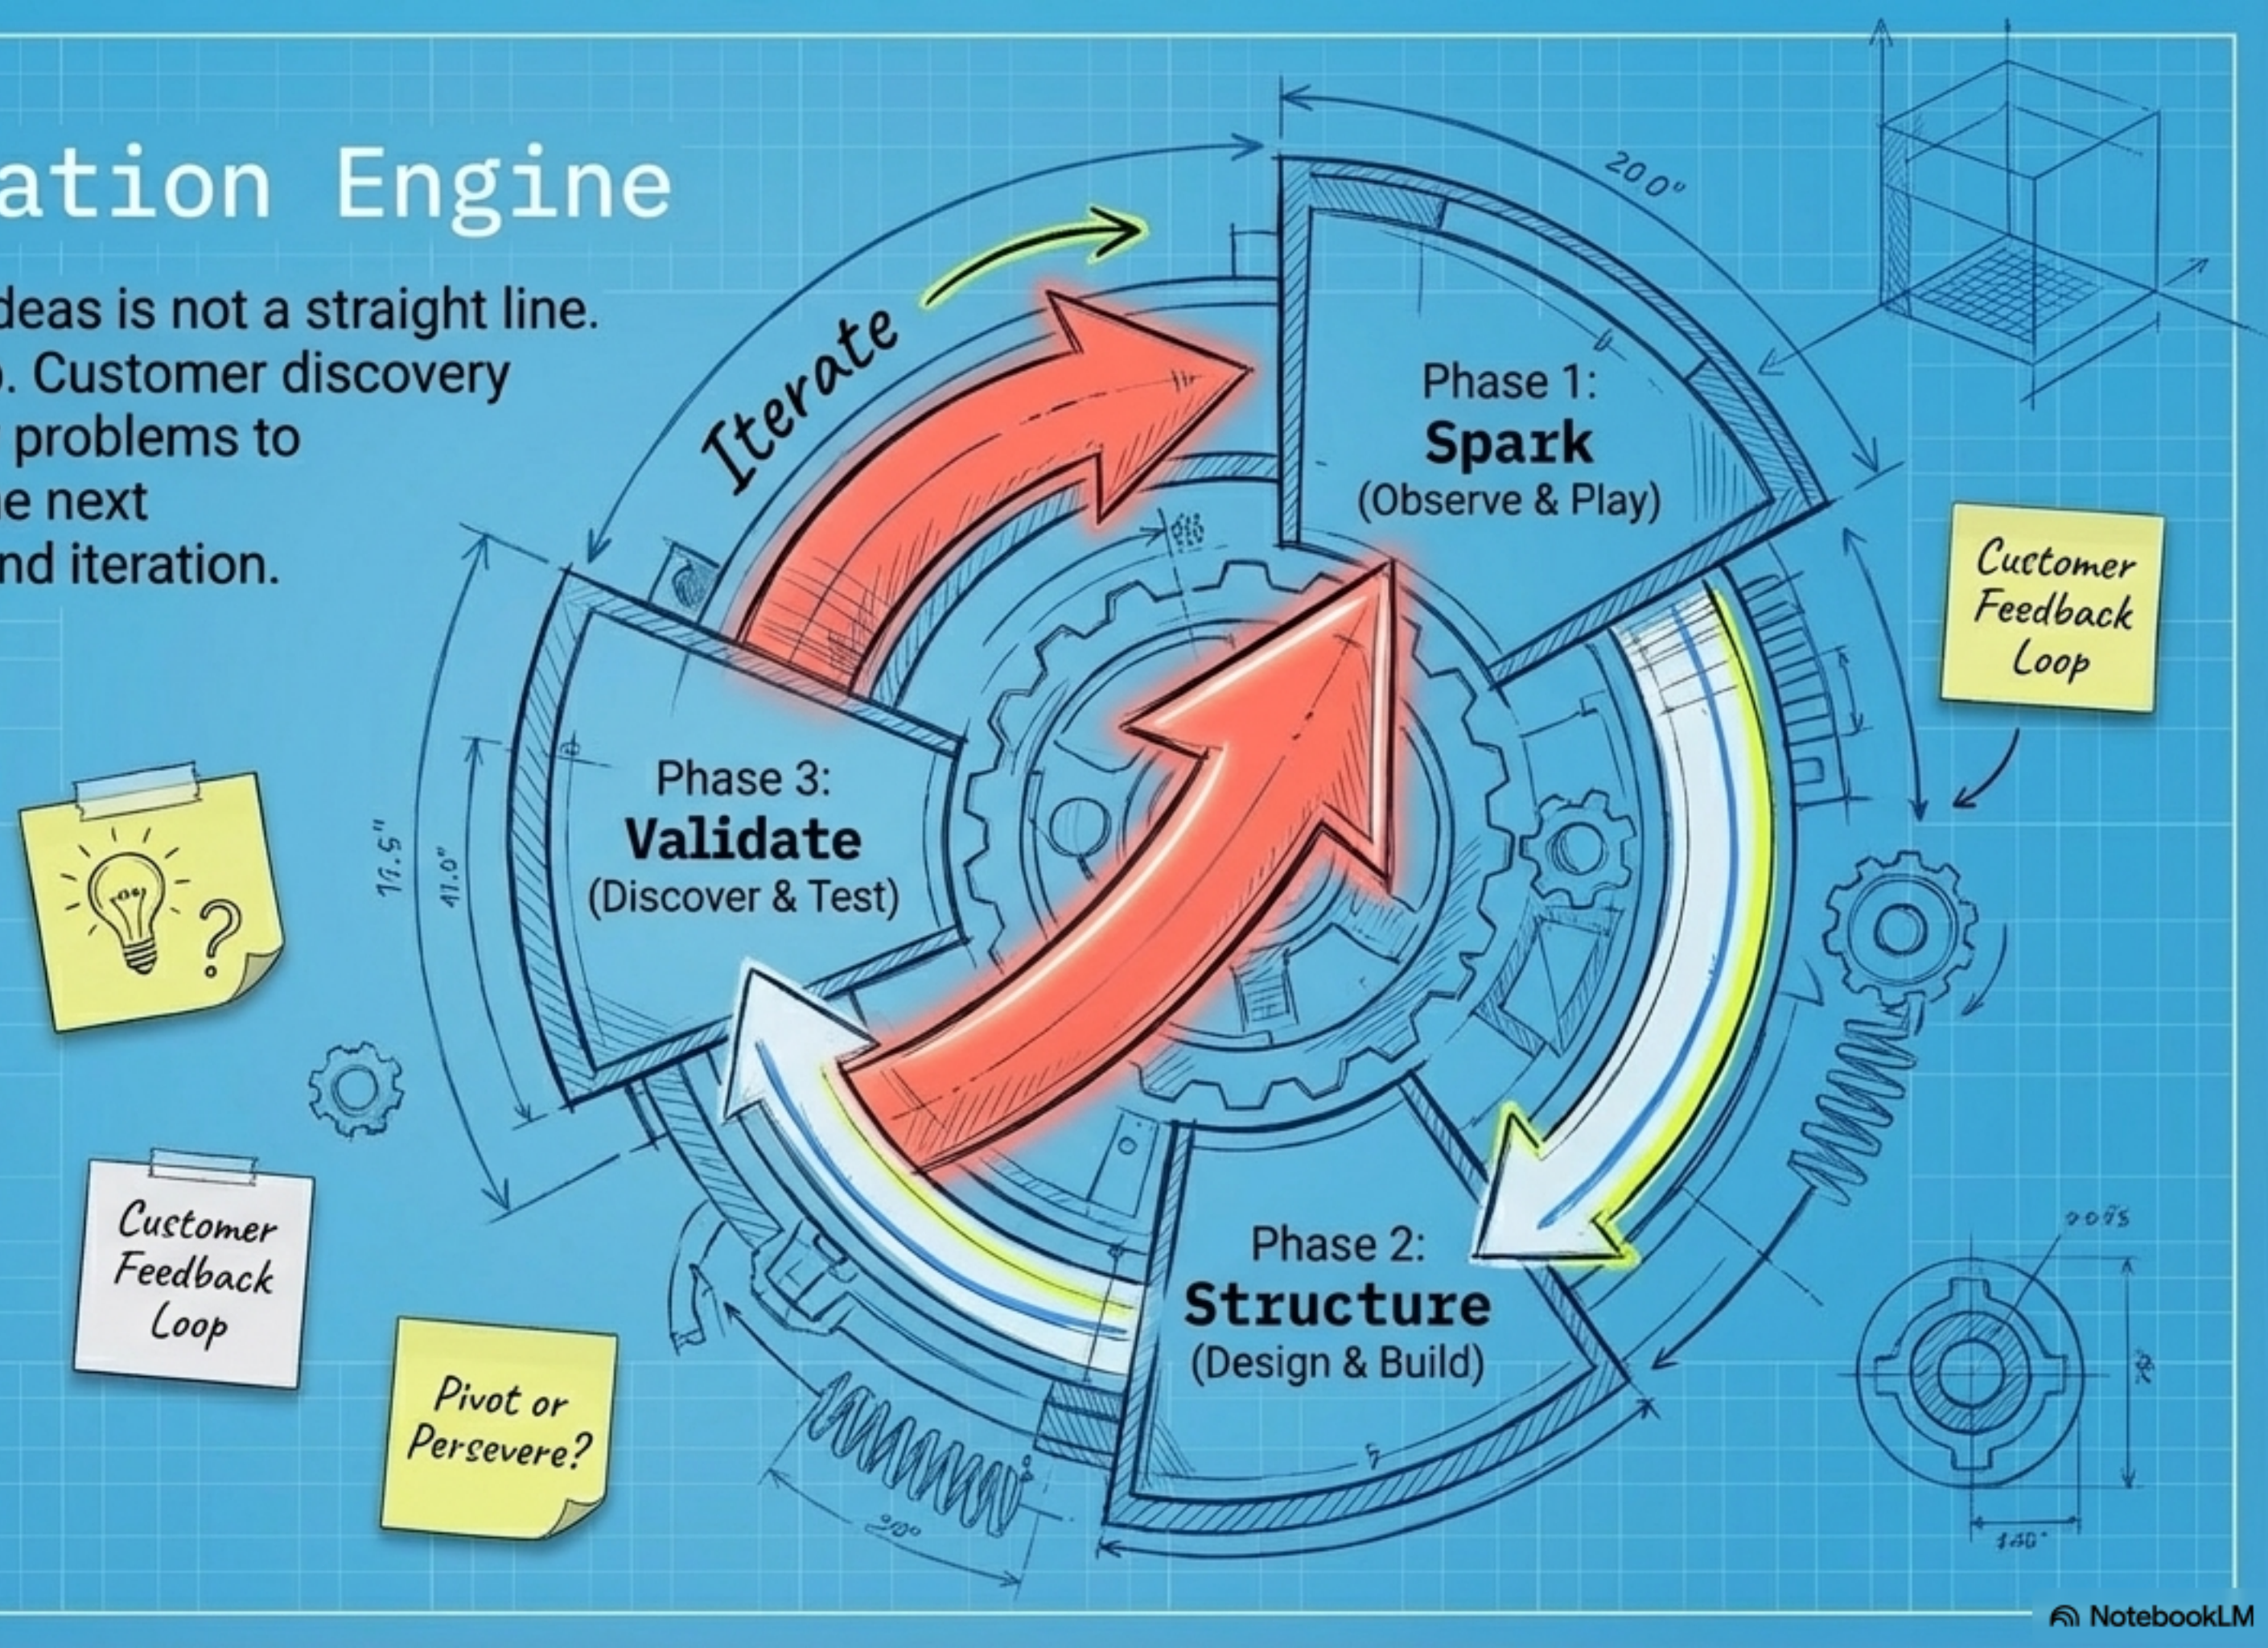

The Customer Discovery Ping-Pong Diagram

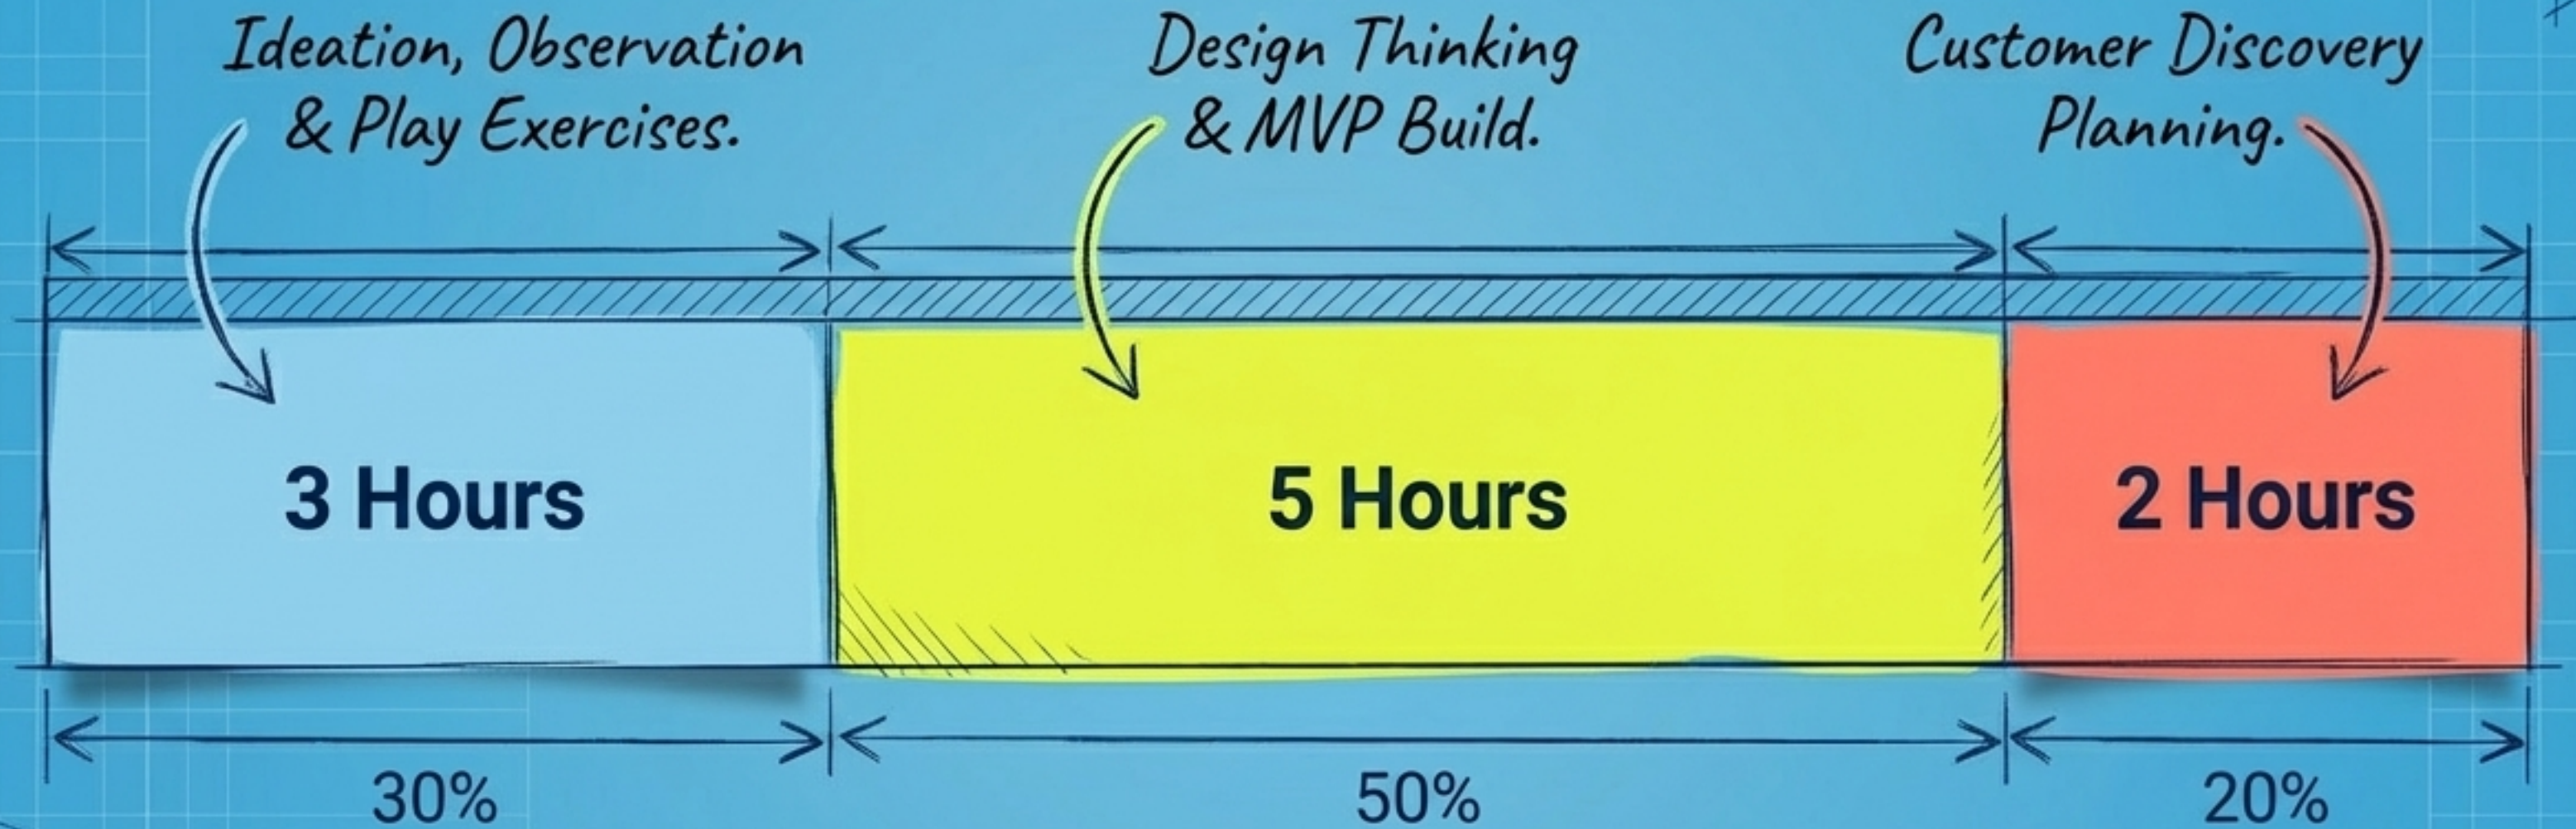

Develop a rigorous Customer Discovery Plan to validate assumptions. Innovation happens in the bounce.

The Innovation Engine

The search for great ideas is not a straight line. It is a continuous loop. Customer discovery inevitably reveals new problems to observe, kicking off the next next cycle of design and iteration.
