Reveal Answer

1. What is the primary purpose of the Content object in an MCP server?

1 / 1 point

- ☐ It creates reusable prompt templates for the agent.
 - ☒ It provides logging, progress reporting, and user input elicitation for server operations.
 - ☐ It defines LLM templates for resources.
 - ☐ It converts tools into LangChain compatible functions.
 - ☒ Nice work
- Content enables richer server interactions by handling logging, progress updates, and eliciting structured input from users.

2. How does user elicitation enhance MCP prompts?

2 / 1 point

- ☐ It allows prompts to automatically convert tools into actions.
 - ☐ It restricts the agent from performing file operations.
 - ☐ It stores reusable prompt templates for future tasks.
 - ☒ It requests structured input from the user to fill missing parameters or clarify ambiguous situations.
 - ☒ Nice work
- Elicitation enables the server to gather required or clarifying information during prompt execution.

3. Which statement best describes MCP resources?

2 / 1 point

- ☒ They provide controlled, typically passive access to data such as files or directories.
 - ☐ Resources are always dynamic and cannot be hard-coded.
 - ☐ They replace the need for MCP tools in performing actions.
 - ☐ They can only return JSON-formatted data.
 - ☒ Nice work
- Resources allow agents to fetch information in a structured way, but are best used for passive data access.

4. What is the purpose of the get_path helper function in the MCP server?

1 / 1 point

- ☒ It converts relative paths to absolute paths within the local_001 and ensures security.
 - ☐ It automatically installs all required dependencies in the virtual environment.
 - ☐ It generates code review prompts for a target file.
 - ☐ It lists all files and directories in the current workspace.
 - ☒ Nice work
- get_path standardizes paths for safe file operations and raises an error if a path is outside the project directory.

5. How does the documentation_generator prompt use MCP Content's elicitation feature?

2 / 1 point

- ☐ It writes documentation to the server without user input.
 - ☐ It automatically selects a random file for documentation.
 - ☐ It only reads the code file but does not generate a prompt.
 - ☒ It requests the subject file and documentation file name from the user.
 - ☒ Nice work
- ctx.elic collects structured input from the user to create the documentation prompt.
