

Part 1: Implementing Enterprise Data Architecture

Task 1: ER Diagram & Normalized Schema

File Name: Part 1_Task 1.pdf

For this task, a **3rd Normal Form (3NF)** schema is setup. This design ensures data integrity by removing transitive dependencies, which is critical for healthcare compliance.

- **Entities and Relationships:**
 - **Patients:** Stores demographics (PatientID is the PK).
 - **Roles:** Defines job types to manage access control (RoleID is the PK).
 - **Employees:** Linked to Roles via a Foreign Key (RoleID).
 - **Appointments:** Bridges Patients and Employees with a DATETIME stamp.
 - **Billing:** Linked to specific Appointments to track financial transactions.
