1. Which benefit do you gain by using AWS Lake Formation to build data lakes?

1 / 1 point

- ☐ Build data lakes quickly
- ☐ Simplify security management
- ☐ Provide self-service access to data
- ☒ All of the above

Correct

This is the best choice because AWS Lake Formation helps with building data lakes quickly, simplifies security management, and provides self-service access to data, encompassing all these benefits in one solution.

2. What are the three stages to set up a data lake using AWS Lake Formation? (Select THREE.)

1 / 1 point

☒ Register the storage location**Correct**

Register the storage location – Lake Formation manages access to designated storage locations within Amazon S3. Register the storage locations that you want to be part of the data lake.

☒ Create a database**Correct**

Create a database – Lake Formation organizes data into a catalog of logical databases and tables. Create one or more databases, and then automatically generate tables during data ingestion for common workflows.

☐ Populate the database☒ Grant permissions**Correct**

Grant permissions – Lake Formation manages access for IAM users, roles, and Active Directory users and groups by using flexible database, table, and column permissions. Grant permissions to one or more resources for your selected users.

☐ Provision AWS data lake infrastructure☐ Develop custom data ingestion pipelines
