Sample Practice Test Questions:

Question 1

You have an application named Manila running on an Azure virtual machine scale set. The data used by the application is stored in a SQL Server on Azure Virtual Machines. The application is not used 24/7.

You need to recommend a disaster recovery solution for the SQL database server. The solution must meet the following requirements:

- The recovery time objective (RTO) should be within 30 minutes.
- The recovery point objective (RPO) should be within 8 hours.
- Must ensure the capability to restore service in the case of a regional failure.

- Minimize costs.

What should you include in the recommendation?

1. Use Azure Backup to backup the SQL server daily.
2. Implement availability sets.
3. Implement SQL Server Always On Availability Groups.
4. Use Azure Site Recovery for the SQL server.

Final Remarks

Having a deep understanding of Azure concepts is essential, but it is not sufficient to pass the exam. You also need to gain hands-on experience by using the Microsoft Azure Portal. Simulate different scenarios to deepen your understanding of various services. The combination of practical and theoretical knowledge will help you analyze difficult questions in the exam.

Lastly, here are some important reminders to keep in mind: always keep track of the time and review your answers before moving on to the next question, especially in the case study and yes/no question sections. Prior to your scheduled exam day, make sure to get enough rest. If you're not feeling fully confident yet, remember that you have the option to reschedule your exam. Good luck, and we wish you the very best!
