Stakeholder Management Essentials

Module 3

Requirements Management and Generative AI Applications

Module 4

Final Project, Final Exam, and Course Wrap-Up

Course Overview

Welcome!

Whether you're a manager, team lead, business analyst, subject matter expert, or data professional, this course is designed for individuals who contribute to projects without holding a formal project management title.

In today's workplace, you may be asked to clarify needs, manage stakeholders, analyze data-driven requirements, or prioritize improvements—even if "Project Manager" isn't in your job description. This course equips you with the tools and confidence to step effectively into that role whenever needed.

Who this course is for

- Non-Project Managers** - business managers, operations leaders, team leads, and functional managers.
- Business Analysts and SMEs** - professionals engaged in requirements gathering and stakeholder collaboration.
- Data Professionals** - analysts, data engineers, and data scientists connecting analytics to business objectives.
- Aspiring Project Managers** - individuals preparing for certifications such as CompTIA Project+ or PM-CAPM.
- Professionals Exploring AI** - learners interested in applying generative AI to communication, stakeholder analysis, and requirements management.

No prior project management experience is required.

What you will learn

By the end of this course, you will be able to:

- Describe the project management framework and its applicability to non-project managers
- Identify and analyze stakeholders using established tools and techniques
- Apply effective communication and stakeholder engagement strategies
- Elicit, document, and manage requirements (Using multiple techniques)
- Leverage Generative AI tools to support stakeholder engagement and requirements management

Module-by-Module Overview

- Module 1: Project Management Essentials** Learn the foundations of predictive (Waterfall) and adaptive (Agile) project approaches and recognize where non-PMs play critical roles.
- Module 2: Stakeholder Management Essentials** Practice identifying, classifying, and engaging stakeholders using stakeholder registers, RACI charts, communication plans, and motivational techniques.
- Module 3: Requirements Management and Generative AI Applications** Explore requirements elicitation, documentation, and prioritization. Learn how to use generative AI to streamline interviews, cluster feedback, and generate user stories.
- Module 4: Final Project, Final Quiz, and Course Wrap-Up** Apply everything you've learned in a capstone project where you manage stakeholders and elicit requirements with AI-powered assistance.

Value of the course

This course will help you:

- Build confidence in navigating project scenarios, even without the formal PM title.
- Communicate effectively with leaders, peers, customers, and data stakeholders.
- Contribute directly to project success by aligning business goals, data insights, and stakeholder needs.
- Develop practical, career-ready skills—including generative AI-enhanced techniques—that prepare you for future leadership opportunities.
