

Reading: Potential Certifications

Estimated reading time: 4 minutes

Overview

In today's competitive business environment, professional certifications are more than just résumé additions. They serve as credible signals that a leader has current knowledge, methodological discipline, and a commitment to continuous learning. This reading explores the value of certifications for managers and compares four well-recognized credentials relevant to business analysis and process modeling: CompTIA Project+, PMI-CAPM, ASQ's CQIA, and the AIGPE Certified Process Mapping Specialist.

Value of certifications for managers

According to Pearson VUE, 91% of hiring managers consider certifications an important factor when evaluating candidates. Certifications help professionals stand out in crowded job markets, support salary increases, and enhance career mobility. For managers, certifications offer several advantages:

- **Standardization of knowledge:** Establish a shared vocabulary and understanding of processes and best practices.
- **Credibility and trust:** Certified professionals often command greater confidence from teams, stakeholders, and leadership.
- **Career leverage:** Open doors to promotions, new opportunities, and expanded responsibilities.
- **Skill updating:** Continuing education requirements help keep your practices current.

Business analysis and process modeling certifications

Let's explore four well-recognized credentials relevant to business analysis and process modeling: CompTIA Project+, PMI-CAPM, ASQ's CQIA, and the AIGPE Certified Process Mapping Specialist.

CompTIA Project+

Description:
An entry-level, vendor-neutral certification ideal for professionals managing small- to medium-sized projects. It covers foundational project management concepts, including scope, scheduling, communication, stakeholders, and risk.

- Requirements**
- No mandatory prerequisites: 6–12 months of project experience recommended
 - One exam (PK0-005 or equivalent), ~90 minutes
 - Renewal required every 3 years

- Benefits**
- Accessible starting point for formal project management
 - Useful for hybrid IT/business environments
 - Serves as a pathway toward PMP (Project Management Professional) or other advanced credentials
 - Ideal for managers who need baseline project structure while supporting process modeling and improvement efforts

PMI – Certified Associate in Project Management (CAPM)

Description:
A global credential built on PMI's standards and frameworks. CAPM emphasizes terms, processes, and approaches defined in the PMBOK® Guide and Agile Practice Guide.

- Requirements**
- Secondary degree (HS diploma/GED)
 - 23 hours of project management education
 - 150-question exam (~3 hours)

- Benefits**
- Globally recognized entry-level certification
 - Strengthens understanding of structured project delivery
 - Helpful for professionals collaborating with PMP-certified teams
 - Supports roles that require project planning, requirements gathering, or process modeling as part of project execution

ASQ – Certified Quality Improvement Associate (CQIA)

Description:
A foundational credential emphasizing quality principles, continuous improvement, and basic process analysis. CQIA reinforces the relationship between quality outcomes and process design.

- Requirements**
- No prerequisites
 - 110-question exam; 3 hours
 - Recertification required every 3 years

- Benefits**
- Introduces essential tools such as process mapping, cause-and-effect analysis, and flow analysis
 - Highly valuable for managers involved in quality, operations, or improvement initiatives
 - Provides structured methods for identifying root causes and process inefficiencies
 - Complements project management certifications with strong process-analysis capability

AIGPE – Certified Process Mapping Specialist

Description:
A highly practical certification focused on documenting and analyzing business processes. This credential is ideal for learners in this course because it aligns directly with process modeling, SIPOC development, workflow analysis, and identifying improvement opportunities.

- Requirements**
- No prerequisites
 - Completion of online modules and certification exam
 - No renewal required

- Benefits**
- One of the most direct certifications for process modeling skills
 - Strengthens abilities in creating accurate, data-driven process maps across multiple levels
 - Supports initiatives involving automation, Lean, SOP development, and system implementation
 - Enhances professional credibility in roles that require understanding and improving workflow performance

Compare business analysis and process modeling certifications

Managers can accelerate their growth by selecting certifications that align with their experience level, industry focus, and long-term career objectives.

- **Entry barrier**
 - **Lowest:** Project+ and AIGPE Process Mapping Specialist (no prerequisites, simple exam, beginner-friendly)
 - **Moderate:** CQIA (no prerequisites but requires a proctored exam and renewal)
 - **Highest:** CAPM (requires 23 hours of PM (Project Management) education and a formal 150-question exam)
- **Focus orientation**
 - **Project+:** Broad, vendor-neutral project management fundamentals
 - **CAPM:** PMI/PMBOK-aligned; predictive and hybrid project delivery
 - **CQIA:** Quality principles, process understanding, foundational improvement tools
 - **AIGPE Process Mapping Specialist:** Deep specialization in process modeling, mapping techniques, and workflow analysis
- **Credibility and career trajectory**
 - **CAPM:** Highly recognized; strong pathway to PMP and PMO (Project Management Office) roles
 - **Project+:** Well-regarded in IT, operations, and hybrid roles
 - **CQIA:** Respected in quality, operations, healthcare, and manufacturing; aligns with Lean Six Sigma advancement
 - **AIGPE:** Immediate credibility for business analysis, process modeling, and process improvement roles
- **Renewal/Maintenance**
 - **No renewal required:** AIGPE Process Mapping Specialist
 - **Renewal required:** Project+ (every 3 years), CQIA (every 3 years), and CAPM (every 3 years via PDUs)

Summary

Professional certifications strengthen managers' credibility, career mobility, and process improvement capabilities. Project+, CAPM, CQIA, and AIGPE certifications support different development paths, from structured project delivery to quality and workflow analysis. Managers can choose suitable certifications that align with their experience level, industry focus, and long-term career objectives.
